databricks

DevOps Essentials for Data Engineering

Databricks Academy
November 2025

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Course Learning Objectives

- Explain the core principles of software engineering best practices, including code quality, version control, documentation, and testing.
- Explain the principles of DevOps including core components, benefits, and the role of continuous integration and continuous delivery (CI/CD) in DevOps.
- Apply principles of modularity to organize PySpark code into reusable functions and components.
- Design and implement effective unit tests and integration tests for your Databricks data pipeline.
- Apply basic Git operations in Databricks using Git Folders to implement continuous integration practices effectively.
- Explain the different methods for deploying Databricks assets, including REST API, CLI, SDK, and Declarative Automation Bundles (DABs).

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Agenda

Course Sections
1. Software Engineering Best Practices, DevOps, and CI/CD Fundamentals
2. Continuous Integration (CI)
3. Introduction to Continuous Deployment (CD)

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Course Prerequisites (REQUIRED)

Proficient Knowledge of the Databricks Platform

- Databricks Workspaces
- Apache Spark
- Delta Lake and the Medallion Architecture
- Unity Catalog
- Spark Declarative Pipeline
- Lakeflow Jobs
- Basic Git Knowledge

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Course Prerequisites (REQUIRED)

Proficient Knowledge of the Databricks Platform

- Databricks Workspaces
- Apache Spark
- Delta Lake and the Medallion Architecture
- Unity Catalog
- Spark Declarative Pipeline
- Lakeflow Jobs
- Basic Git Knowledge

Experience Ingesting and Transforming Data

- Familiarity with PySpark for data processing and DataFrame manipulations.
- Experience in writing intermediate-level queries using SQL

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Course Prerequisites (REQUIRED)

Proficient Knowledge of the Databricks Platform

- Databricks Workspaces
- Apache Spark
- Delta Lake and the Medallion Architecture
- Unity Catalog
- Spark Declarative Pipeline
- Lakeflow Jobs
- Basic Git Knowledge

Experience Ingesting and Transforming Data

- Familiarity with PySpark for data processing and DataFrame manipulations.
- Experience in writing intermediate-level queries using SQL

Knowledge of Python Programming

- Proficient in writing intermediate-level Python, including functions and classes.
- Ability to create, import, and utilize Python packages effectively.

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Lab Exercise Environment

Technical Details

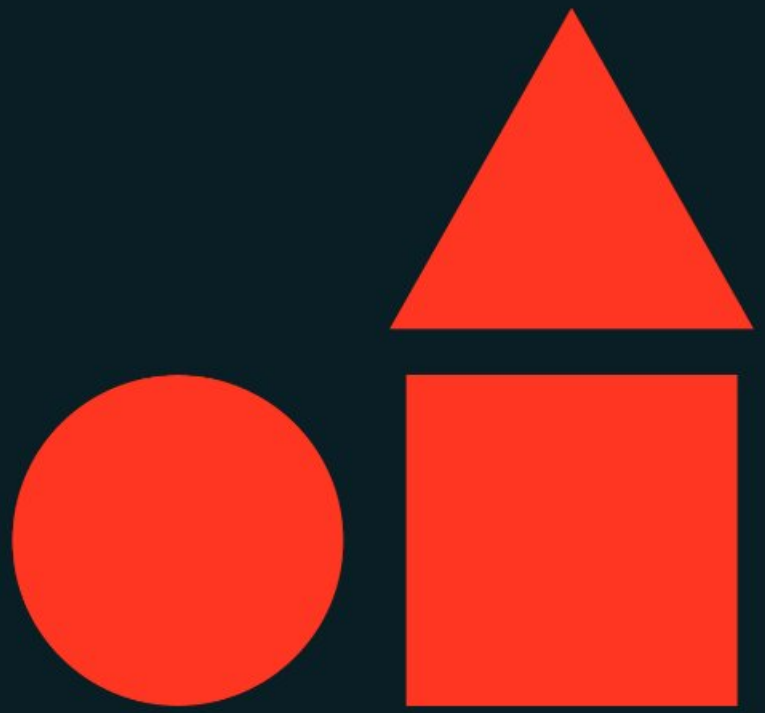

- Your lab environment is provided by Vocareum.
- It will open in a new tab.
- It has been configured with the permissions and resources required to accomplish the tasks outlined in the lab exercise.
- Third party cookies must be enabled in your browser for Vocareum's user experience to work properly.
- Make sure to enable pop ups!

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

databricks

Software Engineering, DevOps, and CI/CD Fundamentals

DevOps Essentials for Data Engineering

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Section Learning Objectives

- Identify key software engineering practices like version control, testing, and code reviews.
- Understand how to modularize PySpark code into reusable and maintainable modules.
- Explain how DevOps and DataOps principles integrate development, operations, and data workflows for smoother collaboration and faster delivery.
- Understand the core concepts and benefits of CI/CD in modern software development, focusing on automation, continuous integration, and continuous delivery of data pipelines.

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Agenda

Software Engineering, DevOps, and CI/CD Fundamentals
1. Introduction to Software Engineering (SWE) Best Practices
2. Introduction to Modularizing PySpark Code
3. DevOps Fundamentals
4. The Role of CI/CD in DevOps
5. Knowledge Check/Discussion

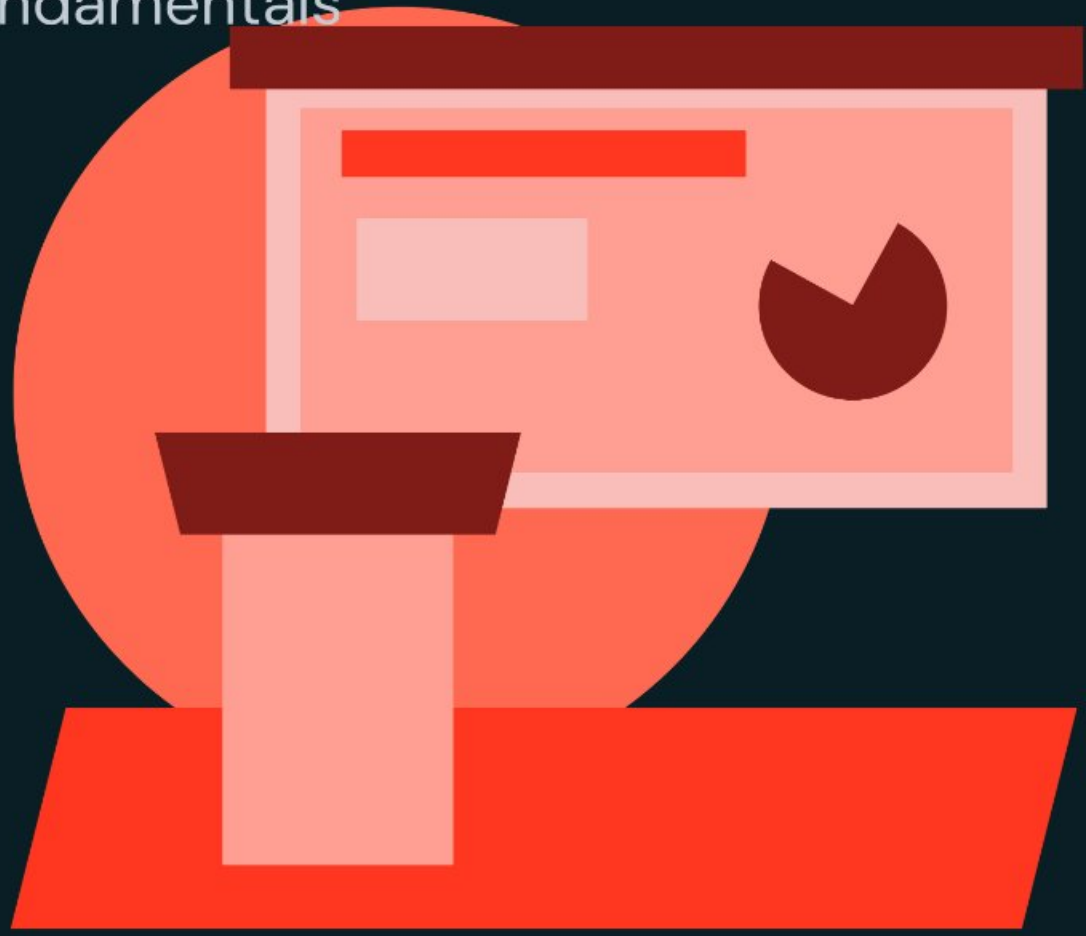

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

databricks

Software Engineering, DevOps, and CI/CD Fundamentals

LECTURE

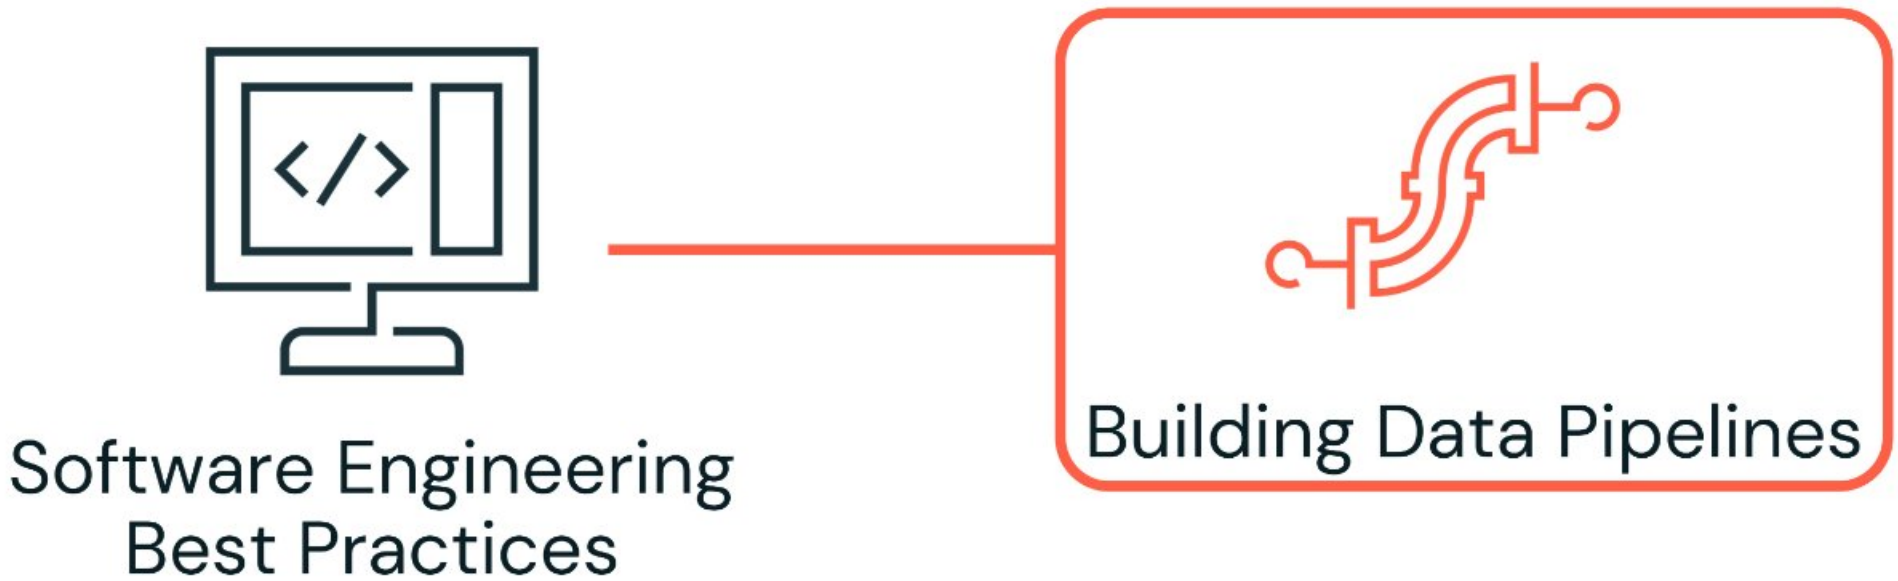

Introduction to Software Engineering (SWE) Best Practices

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Introduction to SWE Best Practices

To build reliable data pipelines, we can learn from software engineering best practices

Following **best practices** in development ensures that your data pipelines are efficient, scalable, and maintainable

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Coding Practices

You can use code **linting** tools to help aid in your coding practices.

Code Readability

Write code that is **easy** to understand, navigate, and maintain.

Naming Conventions

Use descriptive, **consistent** names for variables, functions, and classes.

Modular Design

Break down software into **smaller, reusable** components (functions)

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Coding Practices

Document Code

- Improves Code Maintainability
- Enhances Collaboration
- Facilitates Knowledge Transfer

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Coding Practices

Document Code

Automated Testing

1. Unit Tests

Verifies the functionality of a **single unit** in isolation

2. Integration Tests

Tests how **different** components or systems work together.

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Coding Practices | Document Code | Automated Testing | **Version Control and Code Review**

Version Control

Tools like Git are essential for tracking changes, collaborating with team members, and maintaining a history of the codebase.

Code Review

Help catch bugs early and ensure adherence to coding standards.

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Coding Practices | Document Code | Automated Testing | Version Control and Code Review | **CI/CD**

Continuous Integration (CI)

A practice where developers frequently **commit**, **build**, **test** and **release code** to a shared repository.

Main focus of this course

Continuous Deployment (CD)

Automating the **release** of code to production after passing automated tests.

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Coding Practices | Document Code | Automated Testing | Version Control and Code Review | CI/CD | **Isolated Environments**

Workspaces

Utilizing multiple workspaces, one for each environment

DEV

STAGE

PROD

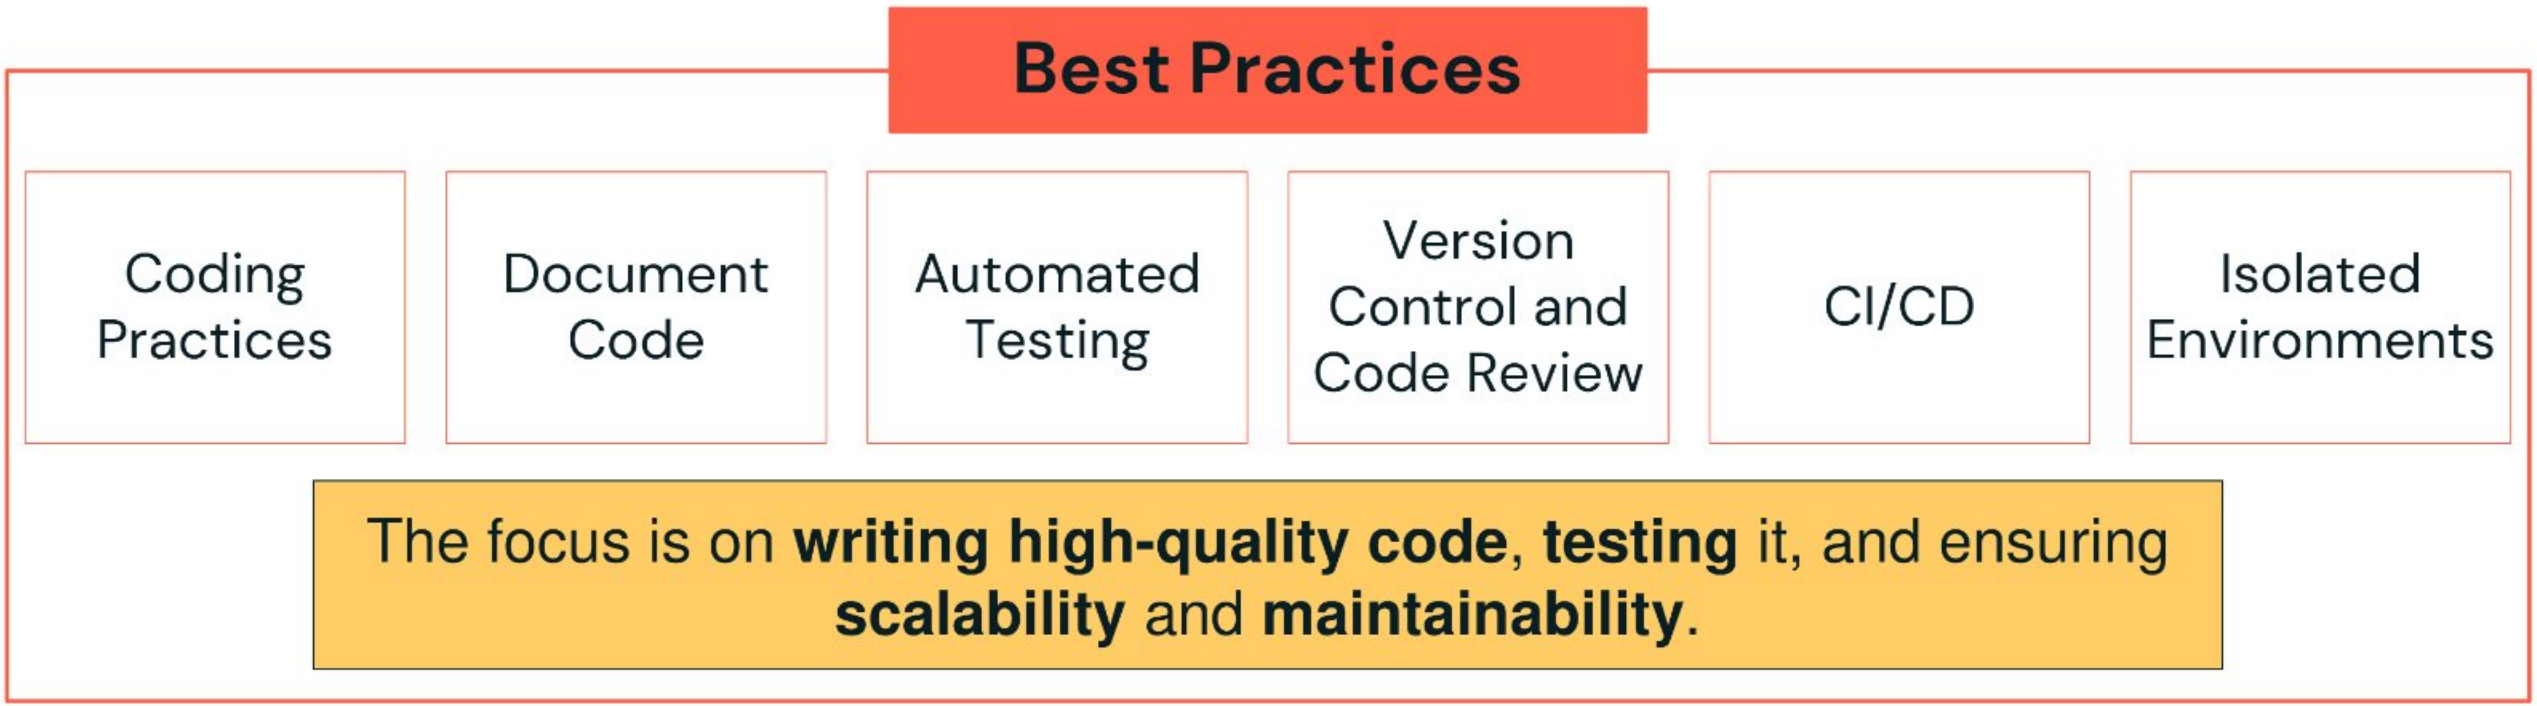

Catalogs

Utilizing multiple catalogs, one for each environment

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Introduction to SWE Best Practices

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Software Engineering with Databricks

Tools Overview

Develop code and run unit tests in a Databricks Workspaces or locally using **Notebooks** or **Files (SQL, Python, Scala, etc.)**.

Utilize Databricks **Git folders** to provide version control and significantly improve the workflow.

Focus on using **Unity Catalog** within a single **Workspace** or **multiple Workspaces** to isolate your environments securely, providing the necessary data access.

Get code **tested** & **deployed** via CI/CD pipelines using Databricks deployment tools to deploy to your desired environment automatically.

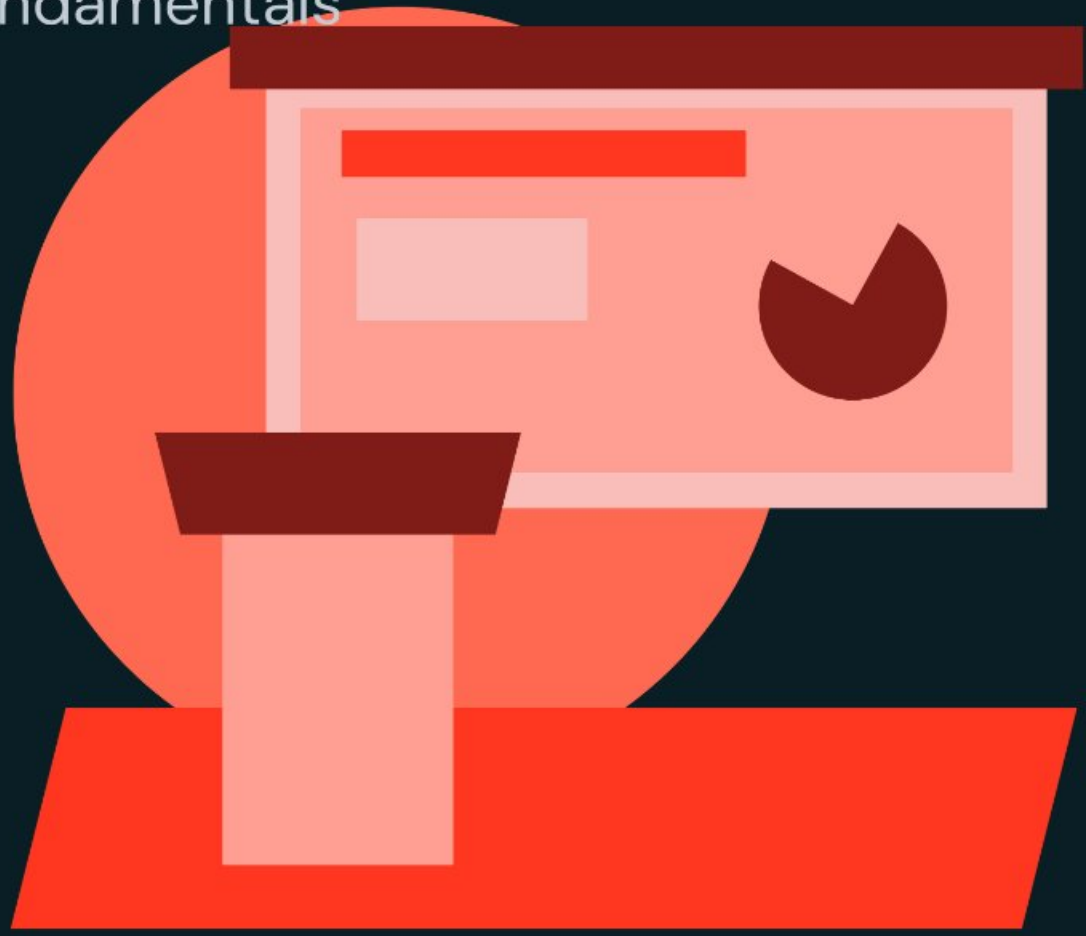

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

databricks

Software Engineering, DevOps, and CI/CD Fundamentals

LECTURE

Introduction to Modularizing PySpark Code

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Modularizing PySpark Code

Non-Modularized Code (Before)

```
# Load data
df = (spark
      .read
      .csv("health.csv",
           header=True,
           inferSchema=True))

# Create column
df = (
 df
 .withColumn("NewColumn",
  when(col("Column") == 0, 'Normal')
  .otherwise('Unknown'))
)
```

Issues

- Everything is in **one block**, making it harder to modify or test specific parts (e.g., loading data, adding new columns).

- Code **duplication** could occur if the same operations are needed elsewhere in the project.

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Modularizing PySpark Code

Modularized Code (After)

```
# Load data
df = (spark
      .read
      .csv("health.csv",
           header=True,
           inferSchema=True))

# Create column
df = (
 df
 .withColumn("NewColumn",
  when(col("Column") == 0, 'Normal')
  .otherwise('Unknown'))
)
```

```
def load_data(file_path):
    return (spark
            .read
            .csv(file_path,
                 header=True,
                 inferSchema=True))

def add_new_col(df, new, s_col):
    return (df
            .withColumn(new,
               when(col(s_col) == 0, 'Normal')
               .otherwise('Unknown')))
```

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Modularizing PySpark Code

Modularized Code Benefits

Benefits

- **Easier Maintenance** by updating only specific functions without changing the entire script.
- **Reuse** functions in different projects.
- **Testing** individual functions through unit tests to ensure code reliability.

```
def load_data(file_path):
    return (spark
            .read
            .csv(file_path,
                 header=True,
                 inferSchema=True))

def add_new_col(df, new, s_col):
    return (df
            .withColumn(new,
               when(col(s_col) == 0, 'Normal')
               .otherwise('Unknown')))
```

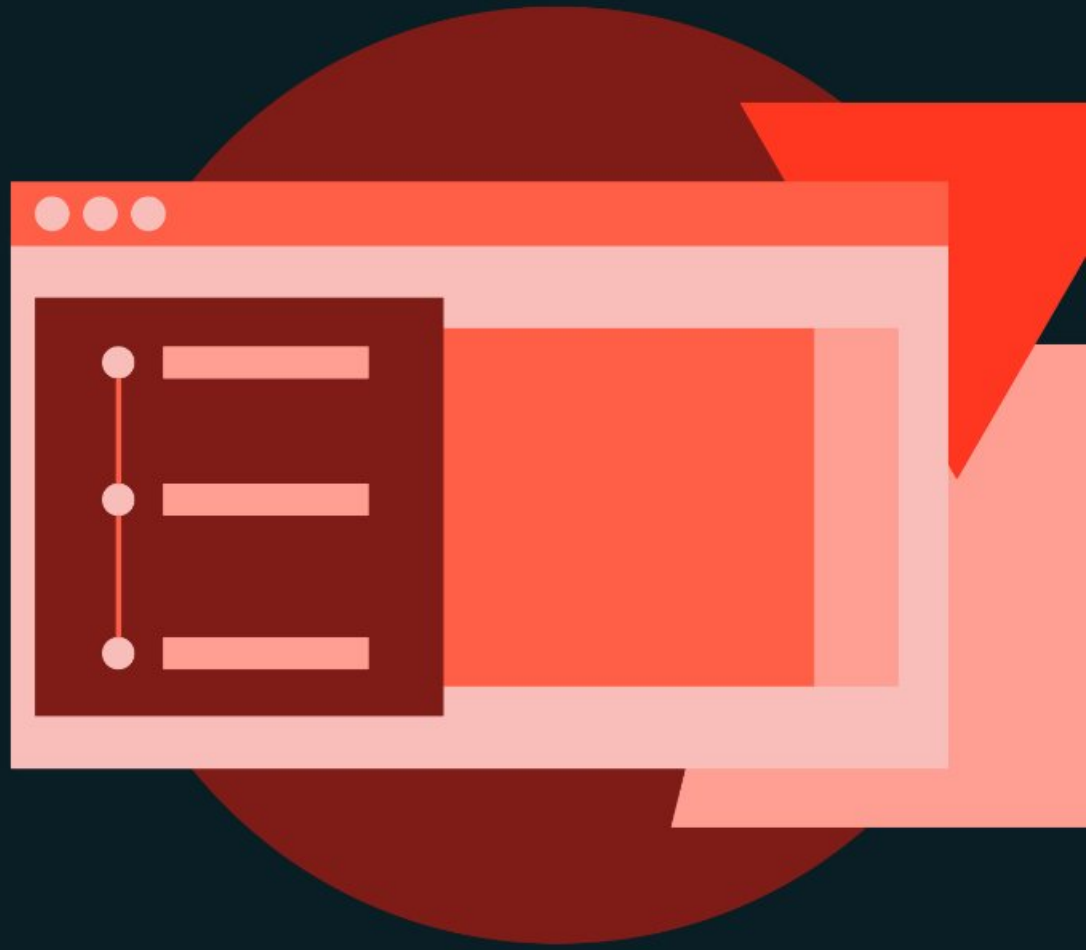

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

databricks

Software Engineering, DevOps, and CI/CD Fundamentals

LECTURE

DevOps Fundamentals

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

DevOps Fundamentals

What is DevOps?

DevOps

Software Engineering Best Practices

IT Operations

Fosters **collaboration** between development and operations teams to **automate Lakeflow Jobs** and **streamline processes**.

Key benefits include

- faster deployments
- improved collaboration
- enhanced reliability
- better scalability

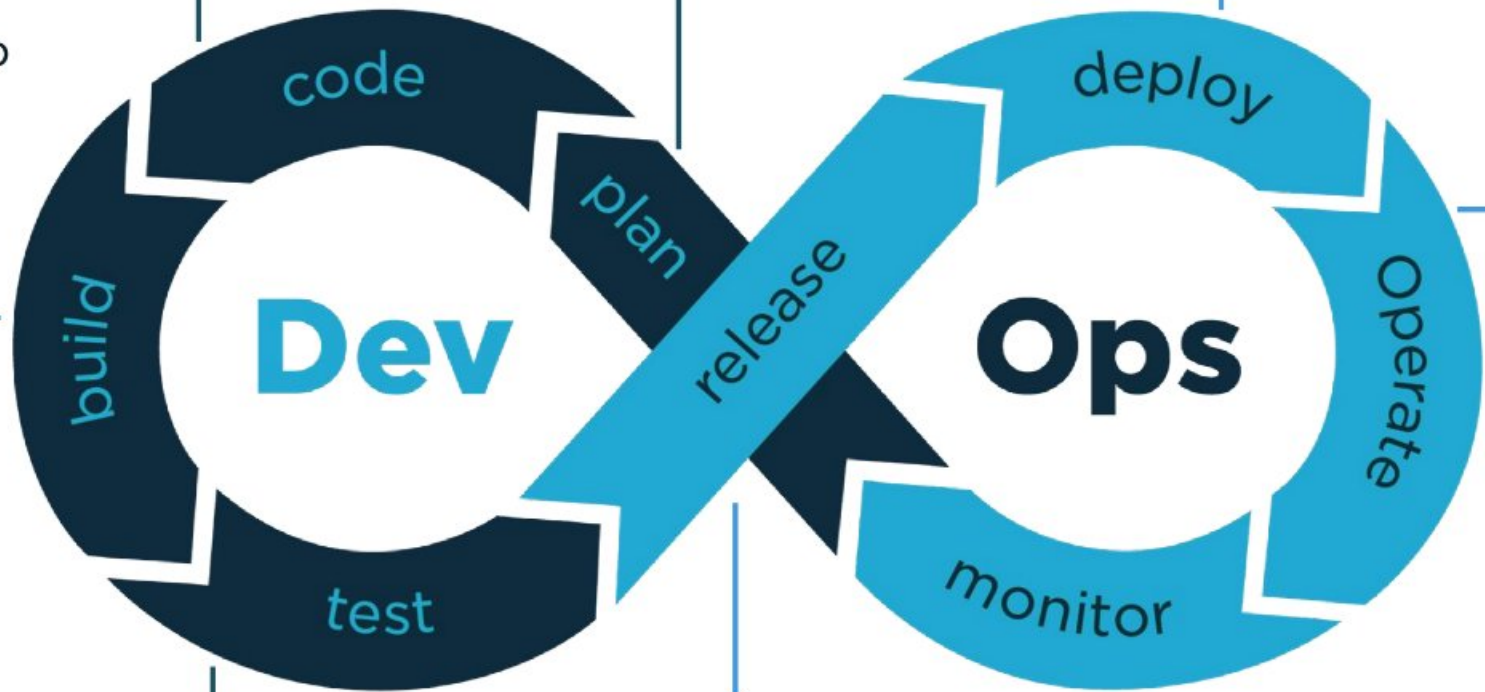

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

CODE the project

PLAN the project's features and requirements

DEPLOY the project to production environments

BUILD the code into executable files

OPERATE the released application

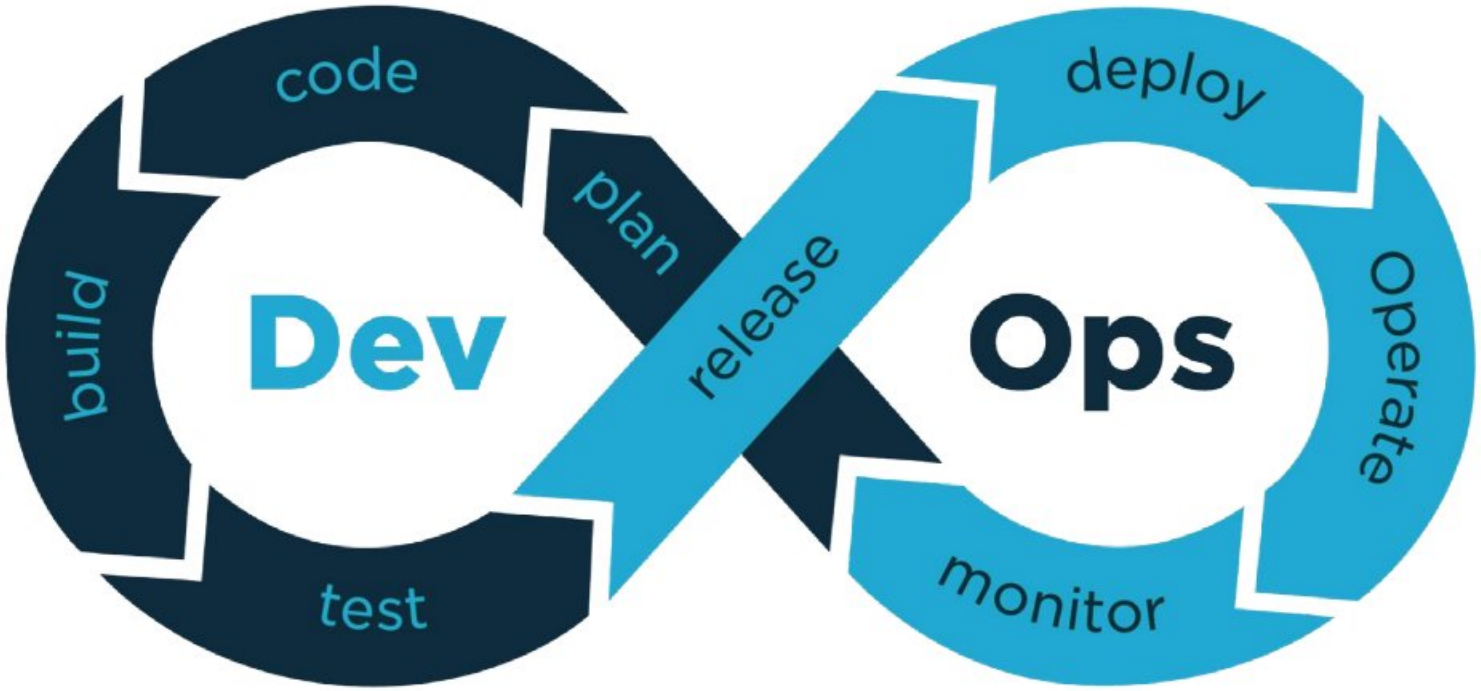

TEST the code works as expected by running **automated** tests

RELEASE the packaged application application ensuring it's ready for roll out

MONITOR the performance and gather feedback

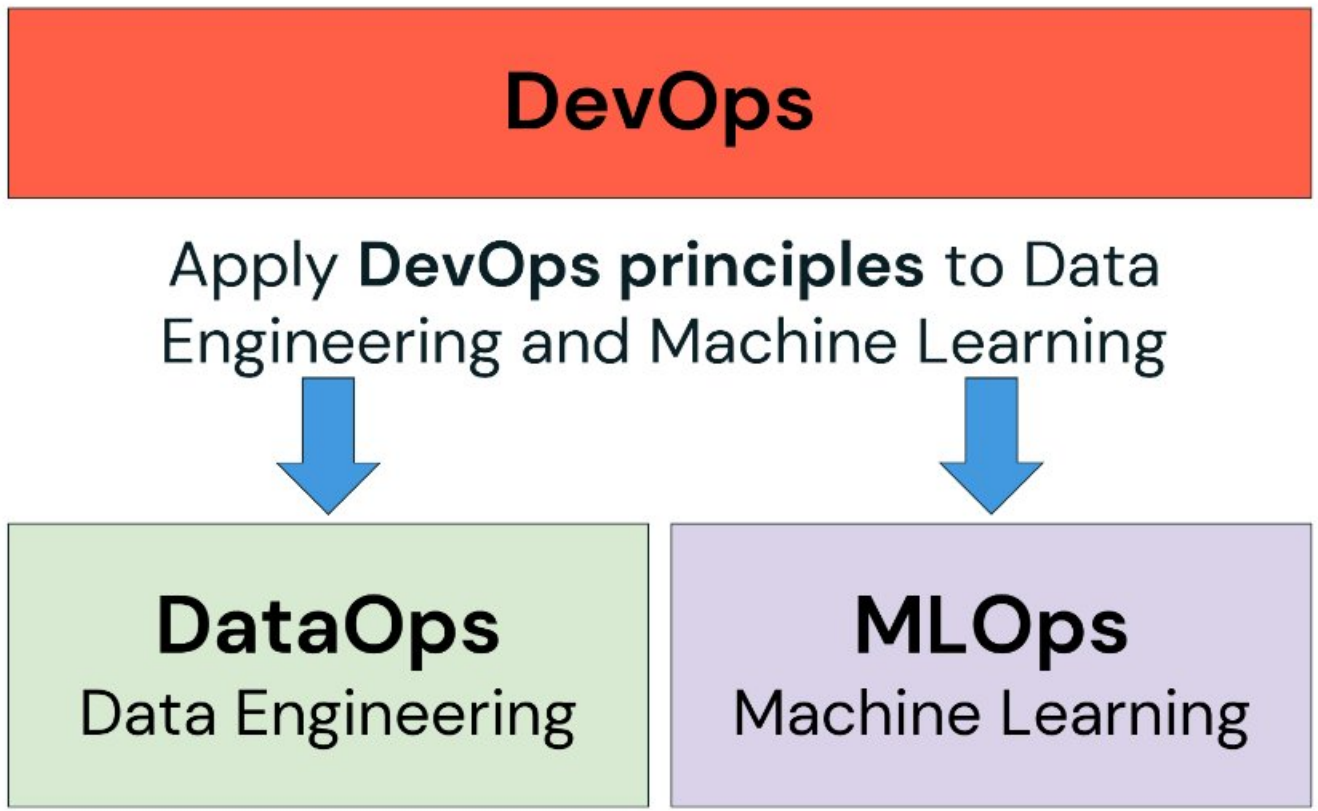

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

DevOps is a process for **continuously** integrating, testing and deploying your code.

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

DevOps For Data Engineering and Machine Learning

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

DevOps, DataOps and MLOps

A set of practices, processes, and technologies

DevOps

Software development and IT operations

- Automate CI/CD
- Enable continuous code testing
- Version control
- Establish Production-grade Lakeflow Jobs
- Orchestration & Automation
- Monitor system performance

DataOps

Building quality data pipeline processes

- Optimize data processing
- Centralize data discovery, management, and governance
- Establish traceable data lineage and monitoring
- Enhance collaboration across teams
- Monitor data quality

MLOps

ML model development and deployment

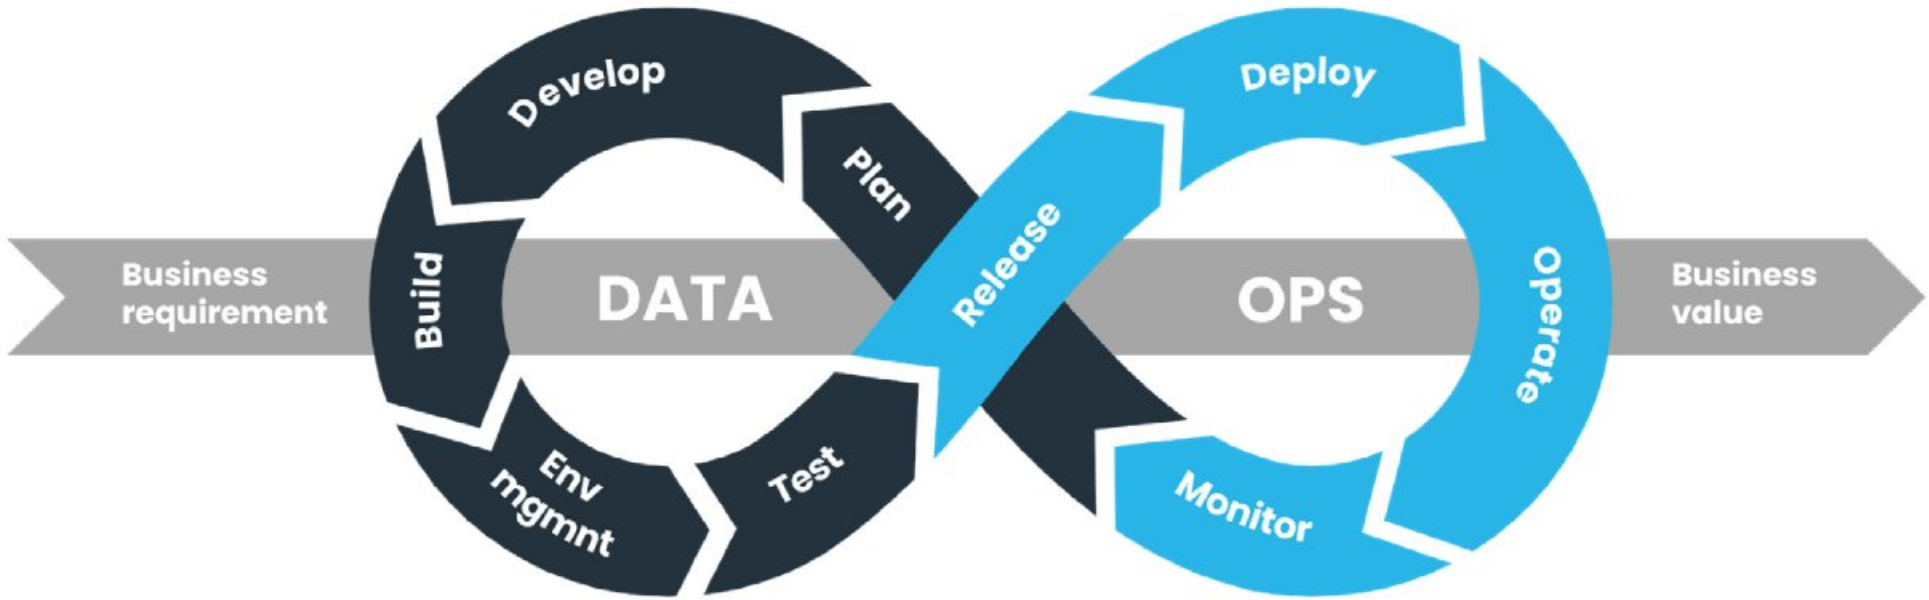

- Treating model code as software
- Treating models as data
- Manage the model lifecycle
- Monitor Model Performance

Outside the scope of this course.

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

DataOps = DevOps for Data Engineering

You want to think about how **DevOps** principles and culture can be applied to your **Data Engineering pipelines**.

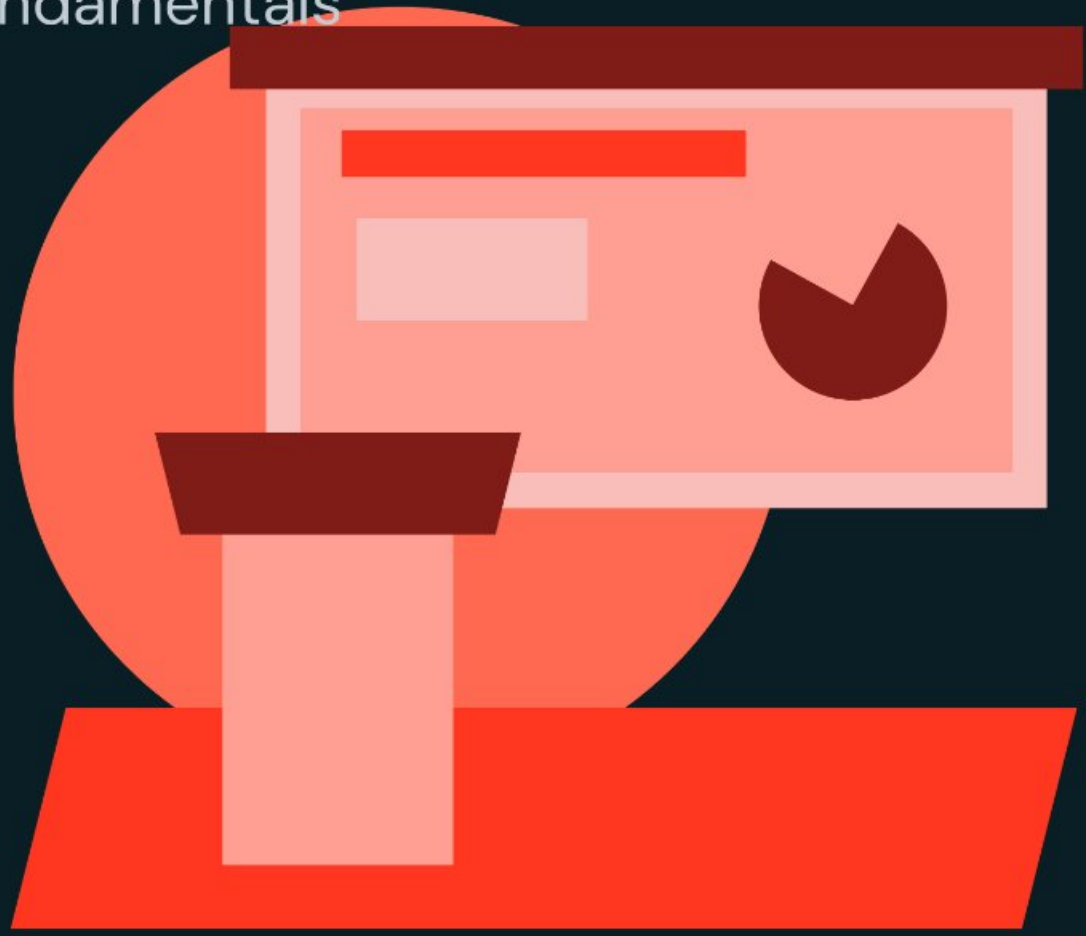

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

databricks

Software Engineering, DevOps, and CI/CD Fundamentals

LECTURE

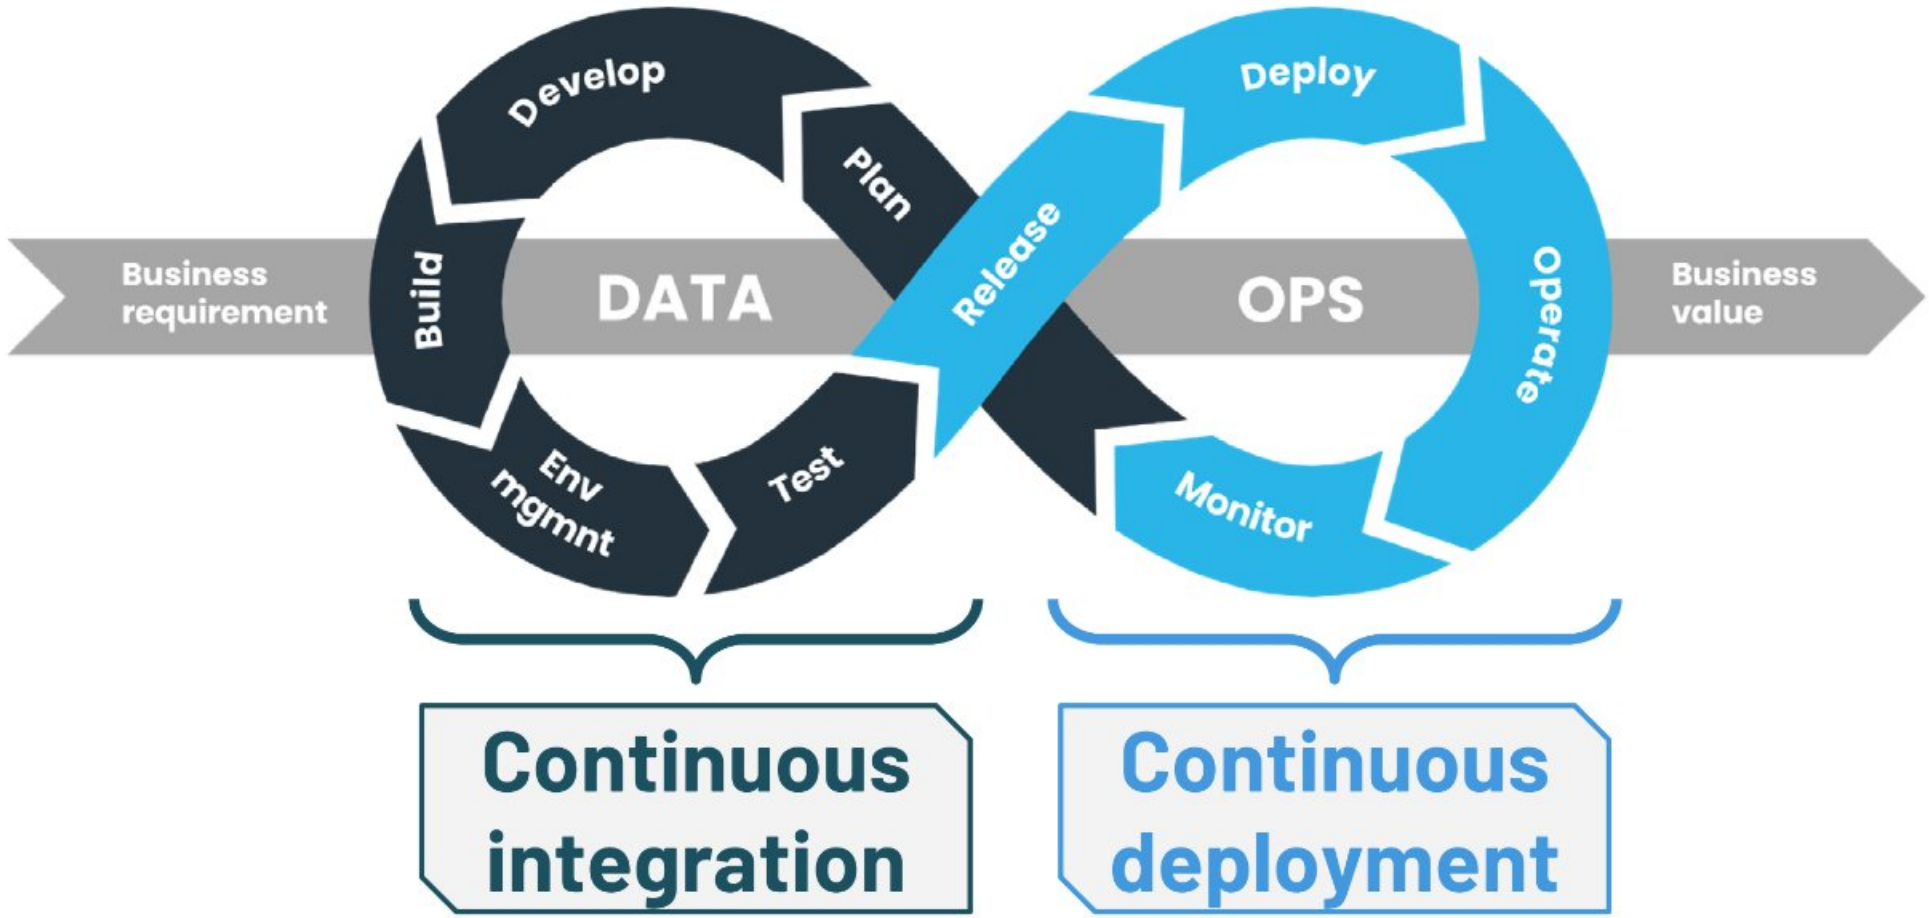

The Role of CI/CD in DevOps

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

The Role of CI/CD in DevOps

Continuous Integration (CI) and Continuous Deployment (CD)

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

The Role of CI/CD in DevOps

Overview

CI/CD Overview

- **Automates** and **streamlines** software development processes.
- **Improves** code quality, speed, and reliability.
- Code is deployed to production through an **automated process**.

CI/CD Process

- Enables **development** and **delivery** of software in short, frequent cycles.
- Uses **automated** pipelines to ensure faster **deployment** and consistency.

CI/CD Adoption

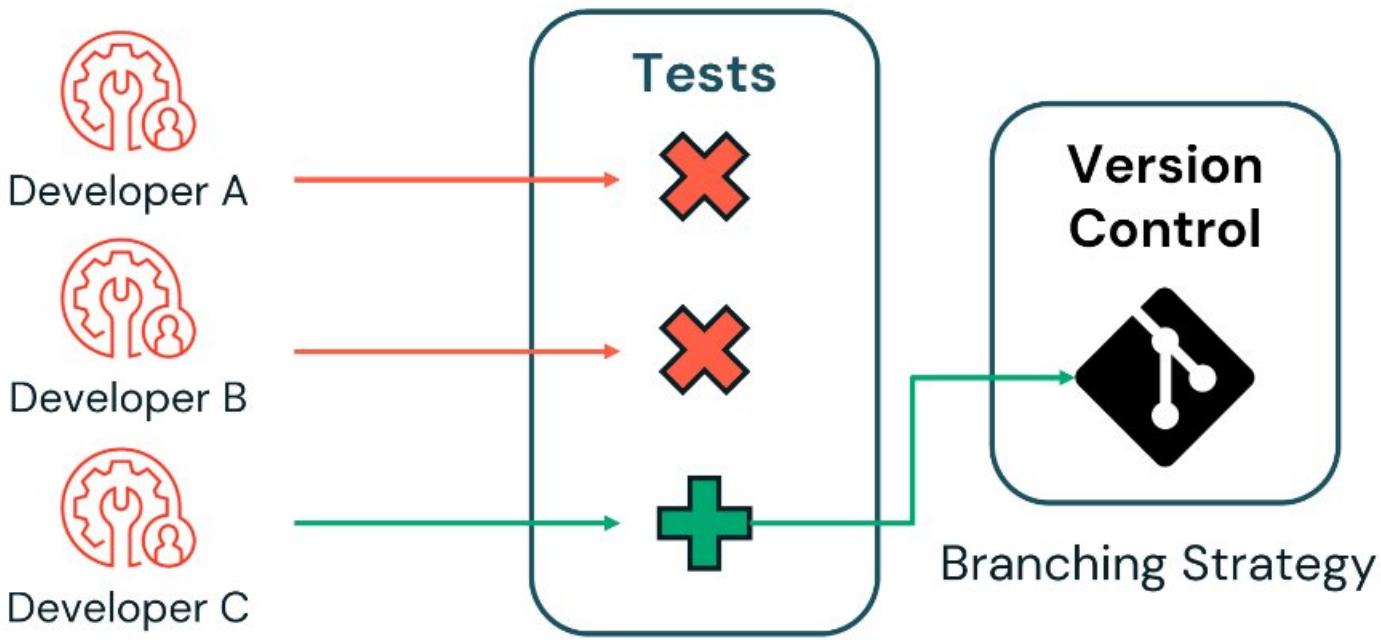

- Common practice in software development.
- **Growing importance** in data engineering and data science.

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

The Role of CI/CD in DevOps

Continuous Integration (CI) High Level Overview

CI involves regularly **merging code** changes from **multiple contributors** into a **central repository** and running **automated tests** to ensure code quality.

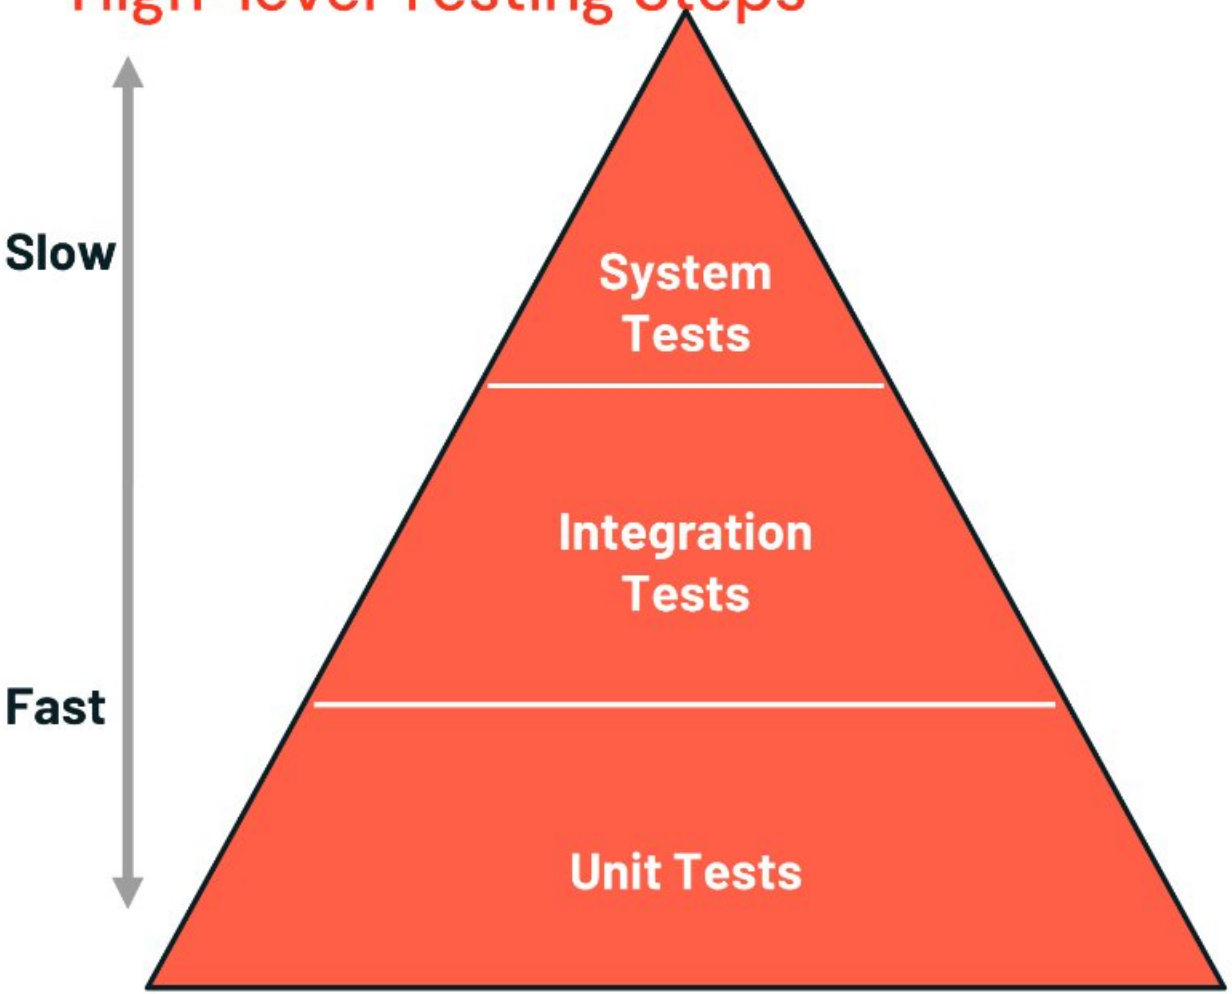

Benefits

- Early Detection of Issues
- Faster Development Cycle
- Improved Collaboration and Code Quality
- Automated Testing and Validation

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

The Role of CI/CD in DevOps

High-level Testing Steps

- Test the entire application, ensuring that all parts function together in a real-world scenario
- **Ex:** End to end data pipeline in a Job

- Test the interaction between different components or systems
- **Ex:** Notebooks / SDP/ Jobs interactions

- Test **individual** functions or methods in isolation
- Fast, low cost, high coverage, and automated
- **Ex:** Custom pyspark functions

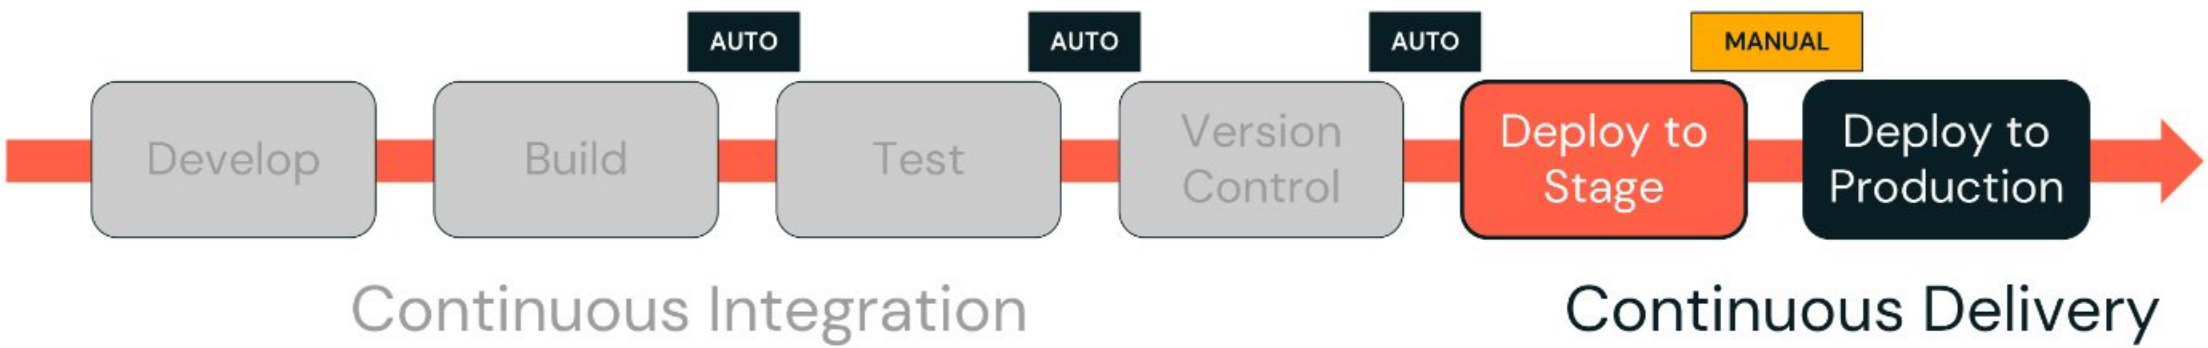

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

The Role of CI/CD in DevOps

Continuous Delivery/Deployment (CD) Overview

Continuous Delivery (CD):

Automatically pushing changes to staging/pre-production environments **with the ability to manually deploy to production** at any time.

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

The Role of CI/CD in DevOps

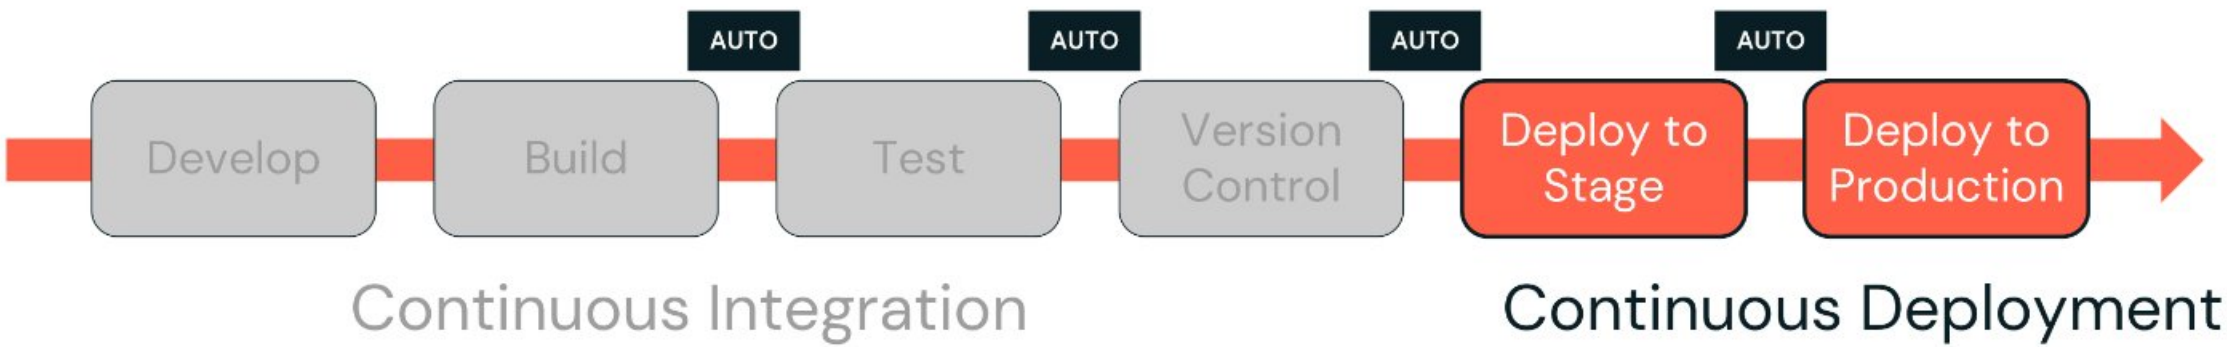

Continuous Delivery/Deployment (CD) Overview

Continuous Delivery (CD):

Automatically pushing changes to staging/pre-production environments with the ability to manually deploy to production at any time.

Continuous Deployment (CD):

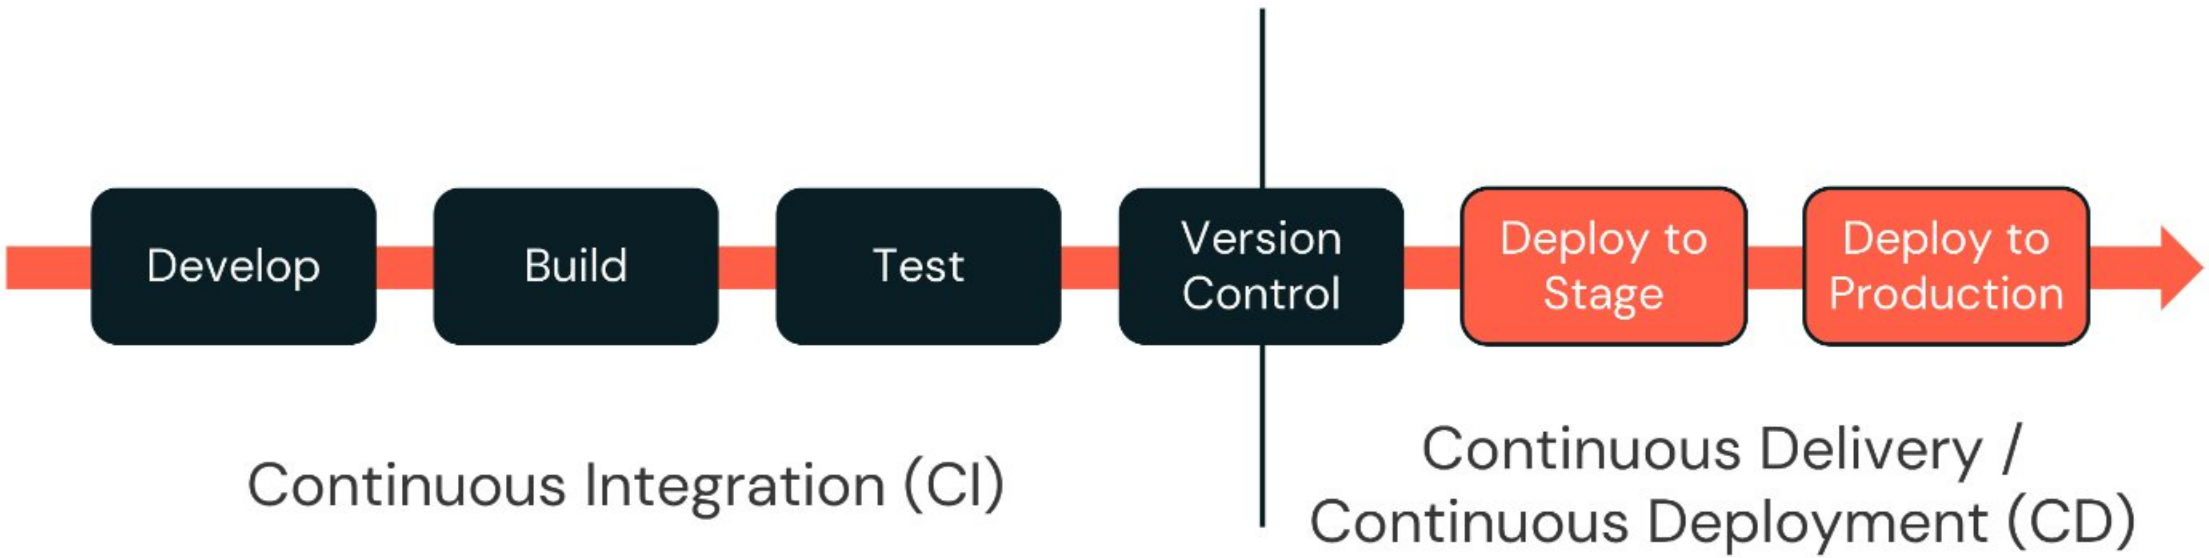

Fully automated process where each change passing tests is immediately deployed to **production**.

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

The Role of CI/CD in DevOps

High-Level CI/CD Workflow Overview

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Iceberg logo are trademarks of the Apache Software Foundation.

Knowledge check

Think about this question and volunteer an answer

Which of the following best describes the primary goal of DevOps?

A. To automate the software development lifecycle and streamline collaboration between development and operations teams.

B. To ensure that the development team focuses solely on writing code without worrying about deployment or infrastructure.

C. To prioritize long release cycles in order to maintain stability.

D. To eliminate the need for quality assurance teams by automating all testing.

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Knowledge check

ANSWER

Which of the following best describes the primary goal of DevOps?

A. **To automate the software development lifecycle and streamline collaboration between development and operations teams.**

B. To ensure that the development team focuses solely on writing code without worrying about deployment or infrastructure.

C. To prioritize long release cycles in order to maintain stability.

D. To eliminate the need for quality assurance teams by automating all testing.

databricks

Continuous Integration (CI)

DevOps Essentials for Data Engineering

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Section Learning Objectives

- Learn to plan and structure a data engineering project, defining key components and isolation steps for successful execution.
- Learn to write unit tests for PySpark code to ensure functionality and catch errors early.
- Apply the pytest framework in Databricks to execute unit tests and analyze the test results for errors.
- Learn to run integration tests using Spark Declarative Pipeline and Lakeflow Jobs to validate data pipeline functionality.

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Agenda

Continuous Integration
1. Planning the Project
2. Introduction to Unit Tests with Pyspark
3. Executing Integration Tests with SDP and Lakeflow Jobs
4. Version Control with Git Overview

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

databricks

Continuous Integration (CI)

LECTURE

Planning the Project

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Planning the Project

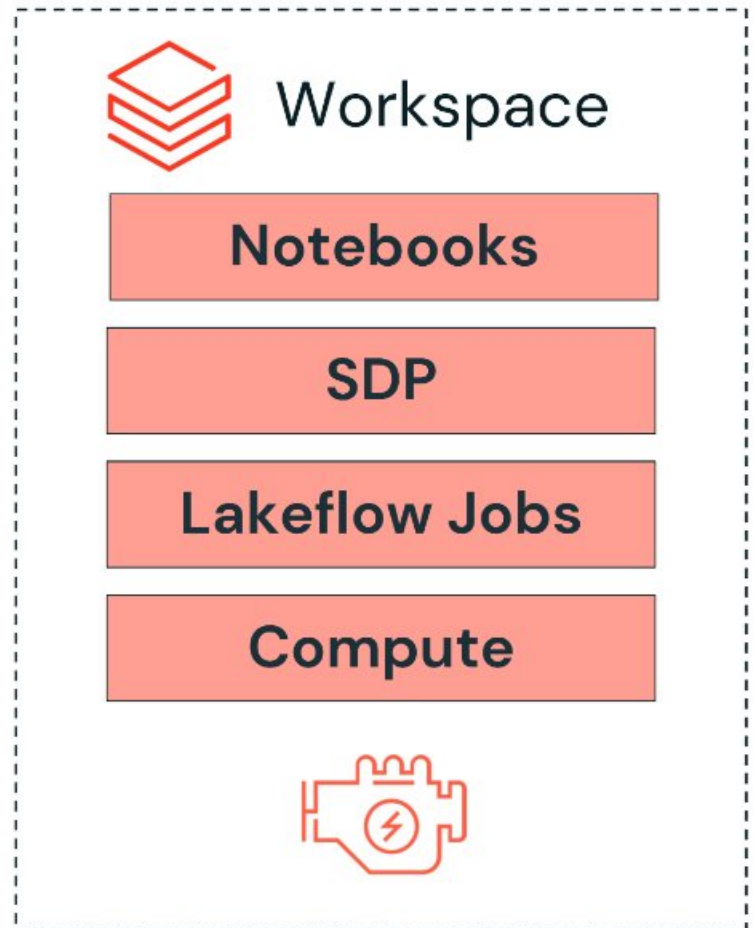

Requirements

Deliverable

- Visualize Health Data

Tasks

- Ingest daily incremental CSV files to a bronze table
- Create a clean silver table
- Create gold tables to share with consumers

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Planning the Project

Setting Up Your Data Environments

Dev Data

- Often a Small Static Subset of Production Data
- Can be Anonymized or Synthetic Datasets
- Supports Rapid Development and Testing
- Ensures Privacy and Data Integrity

Stage Data

- Staging Data Mirrors Production Structure & Volume, Typically Static
- Can be Anonymized or Scrubbed Sensitive Information
- Ensures Realistic Testing and Validation

Prod Data

- Production Data: Live & Fully Operational
- Contains Real User Data
- Continuously Updated
- Requires High Security, Privacy, & Compliance Standards

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Planning the Project

Isolating Environments

Workspaces

Utilizing multiple workspaces, one for each environment

DEV

STAGE

PROD

Catalogs

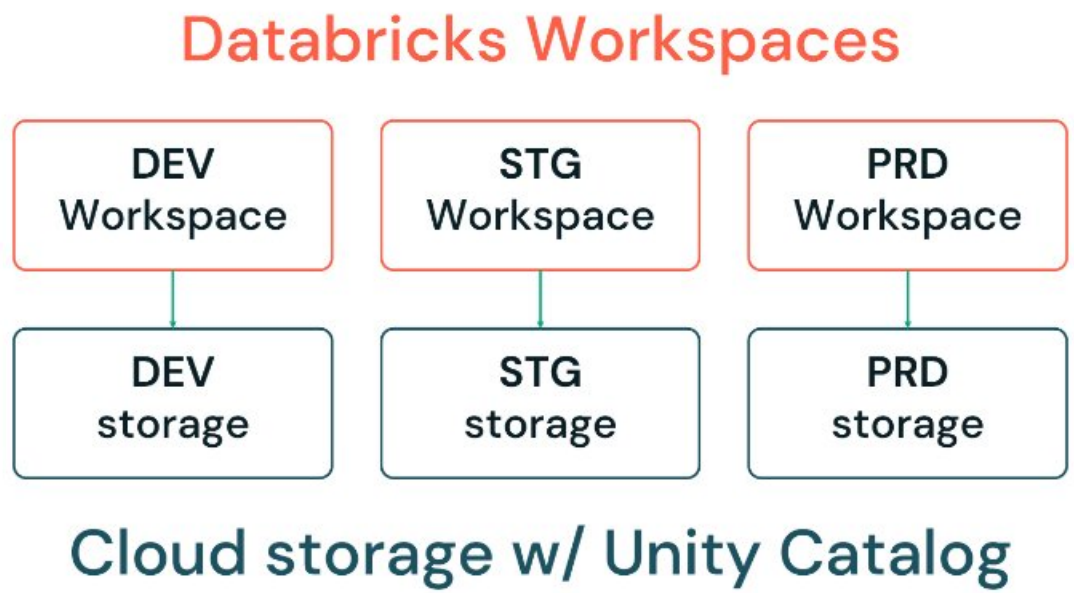

Utilizing multiple catalogs, one for each environment

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Planning the Project

Workspace Isolation Overview

You can **isolate** your dev, stage and prod environments at the Workspace and storage level.

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Planning the Project

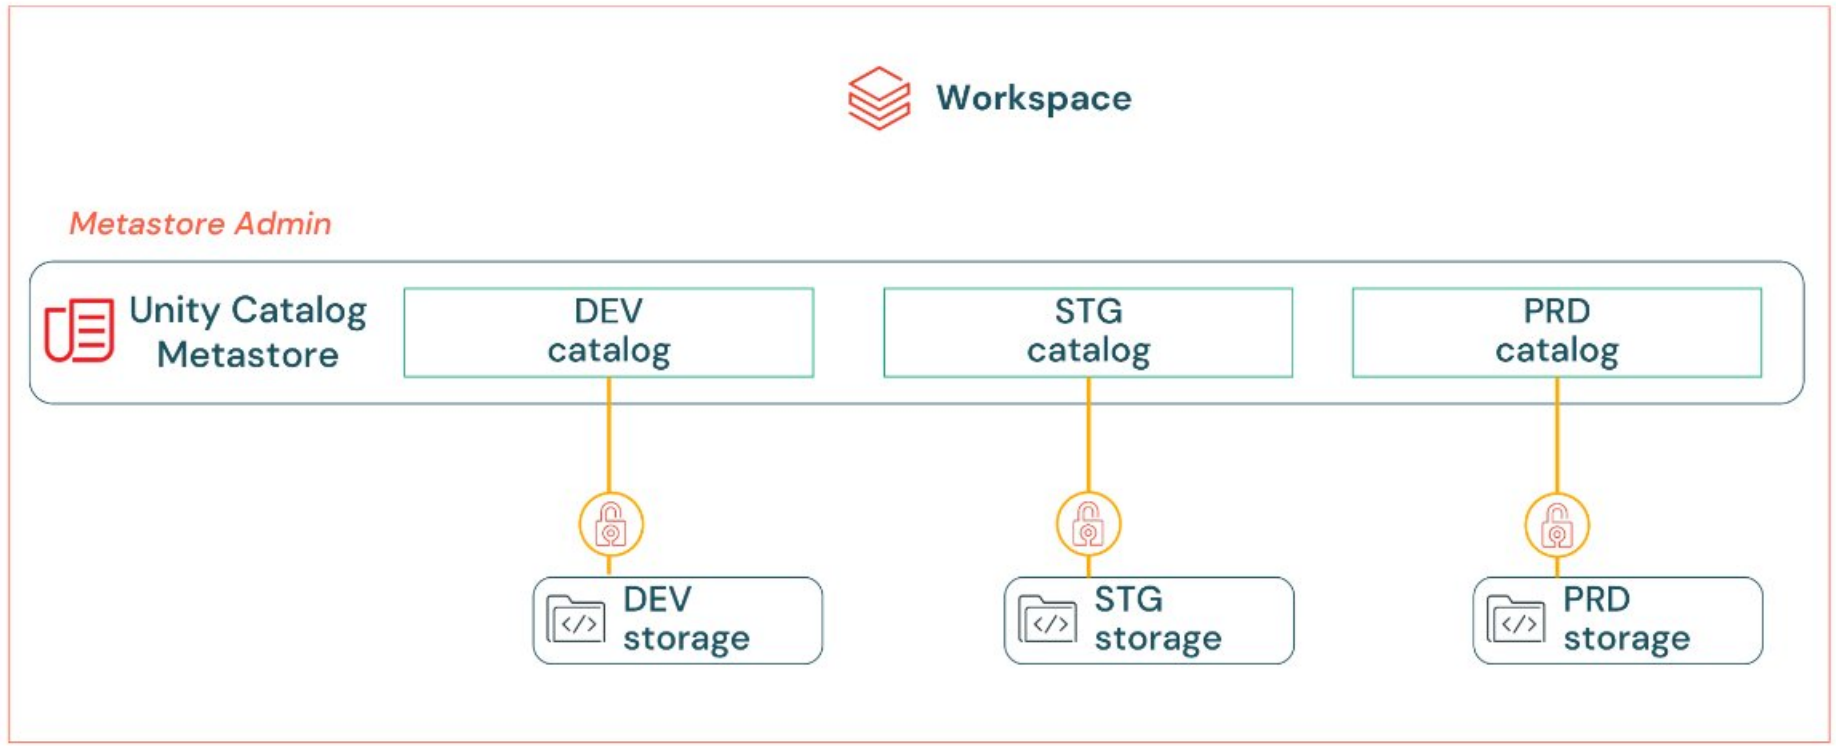

Unity Catalog Isolation

Storage isolation

This example separates the storage locations on catalog level

UC Access Control

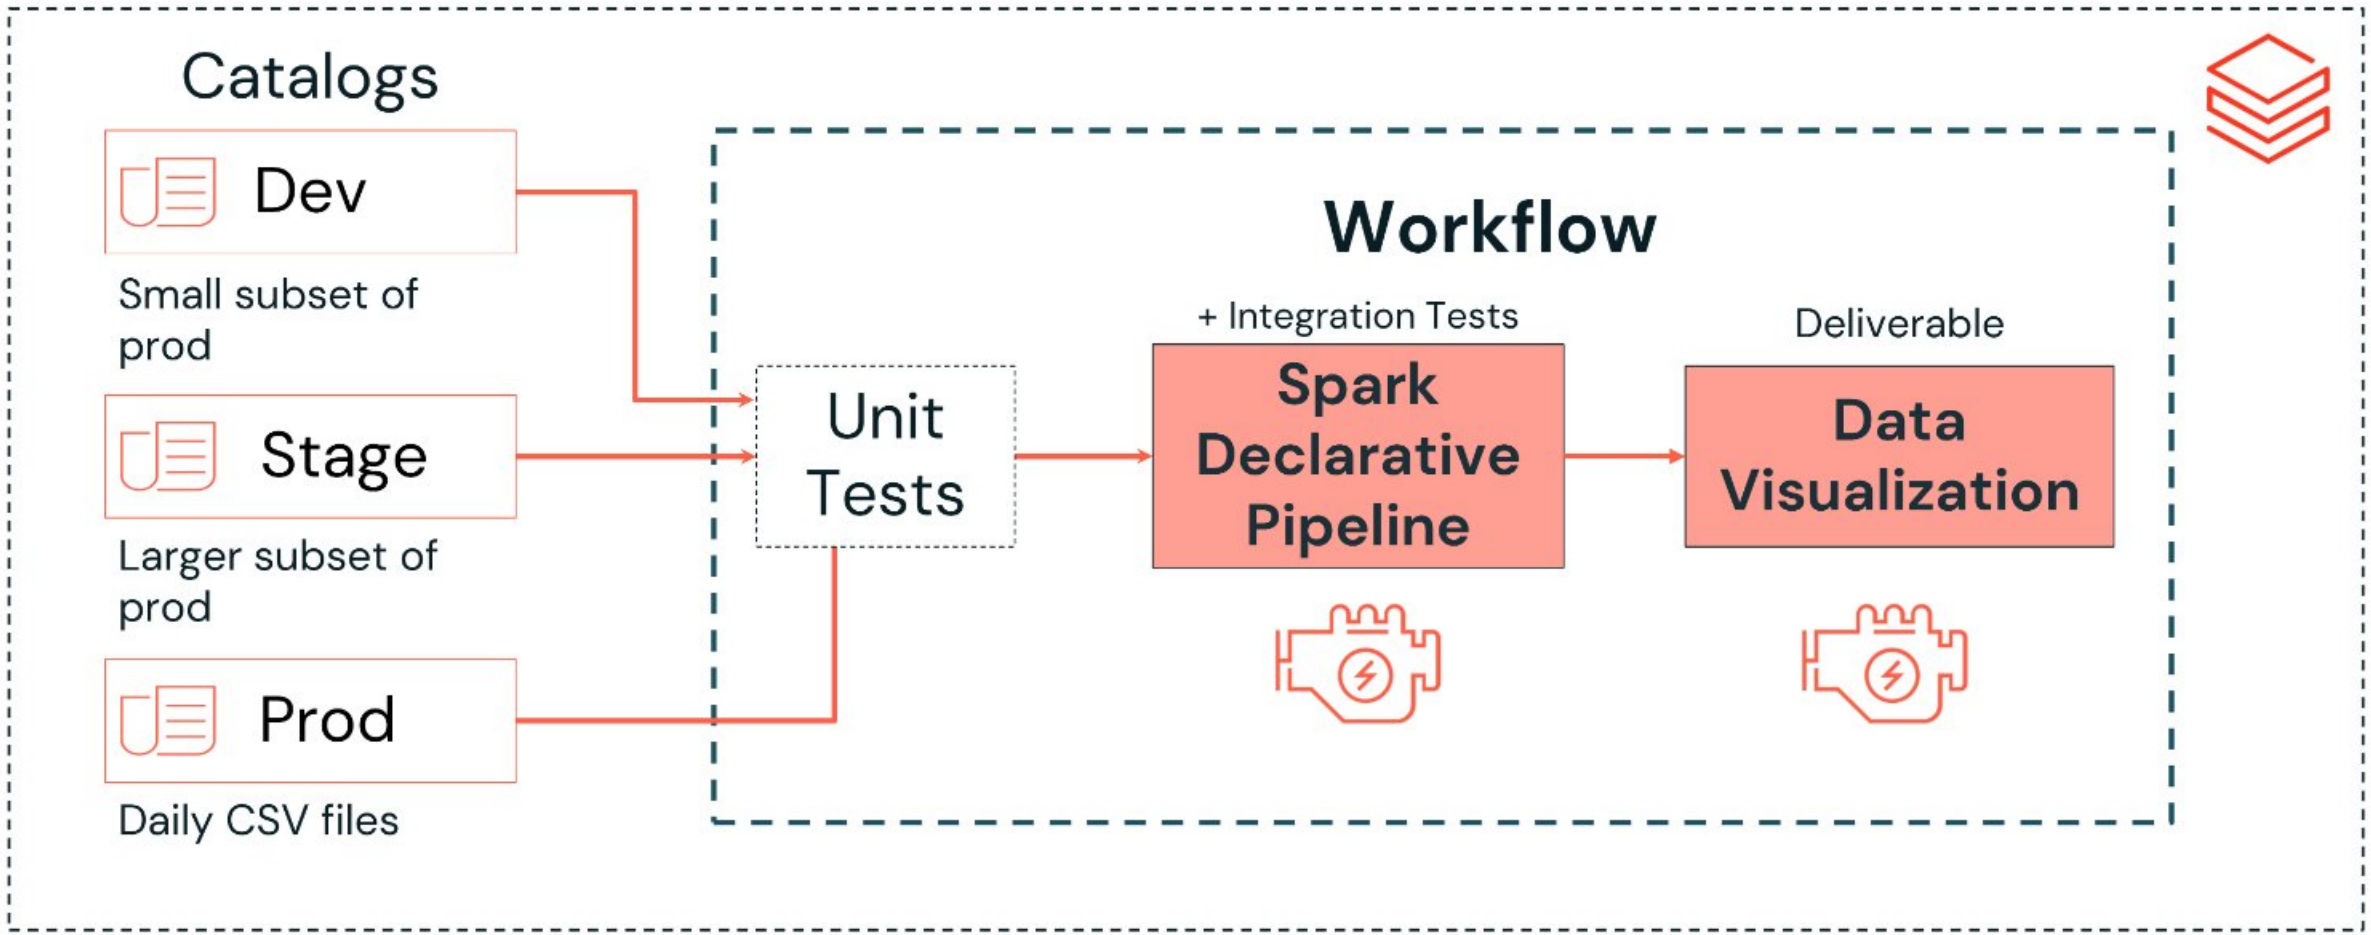

Users should only gain access to data/ metadata based on agreed access rules

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Planning the Project

Course Project Architecture

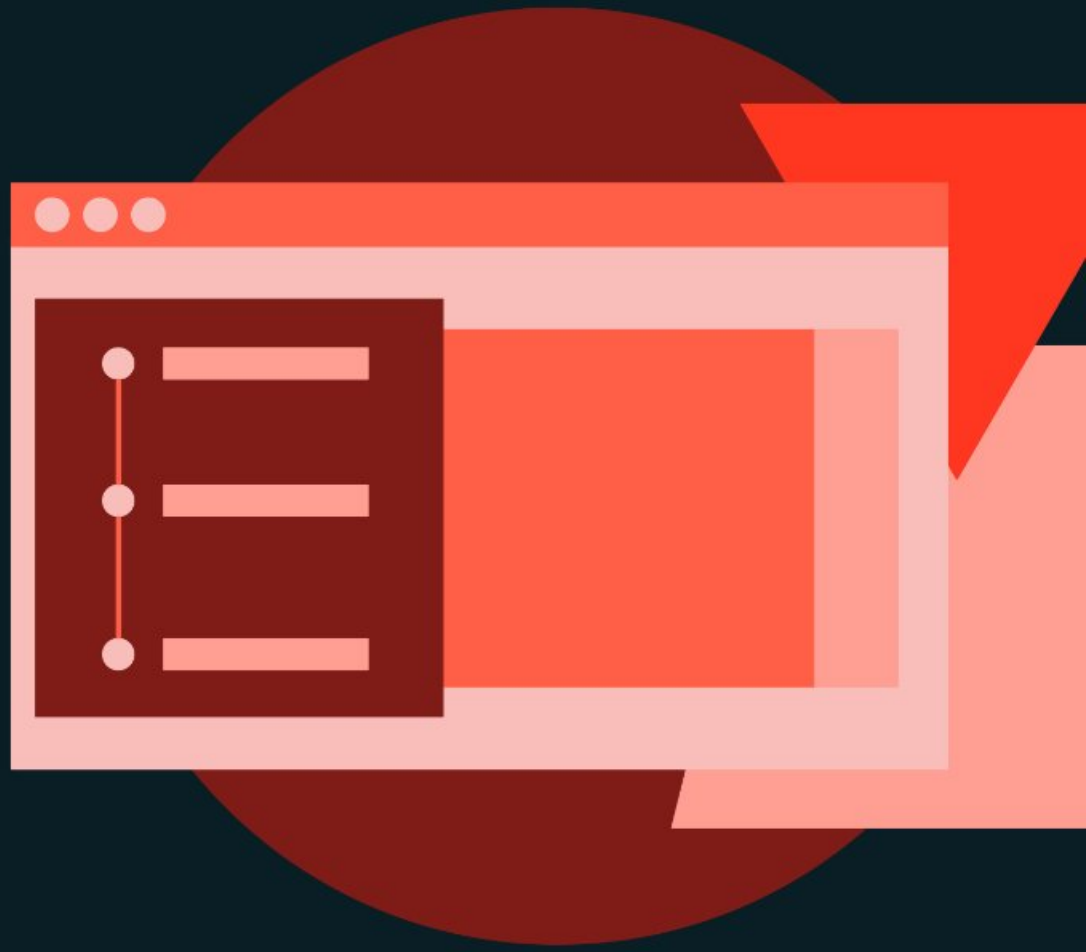

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

databricks

Continuous Integration (CI)

LECTURE

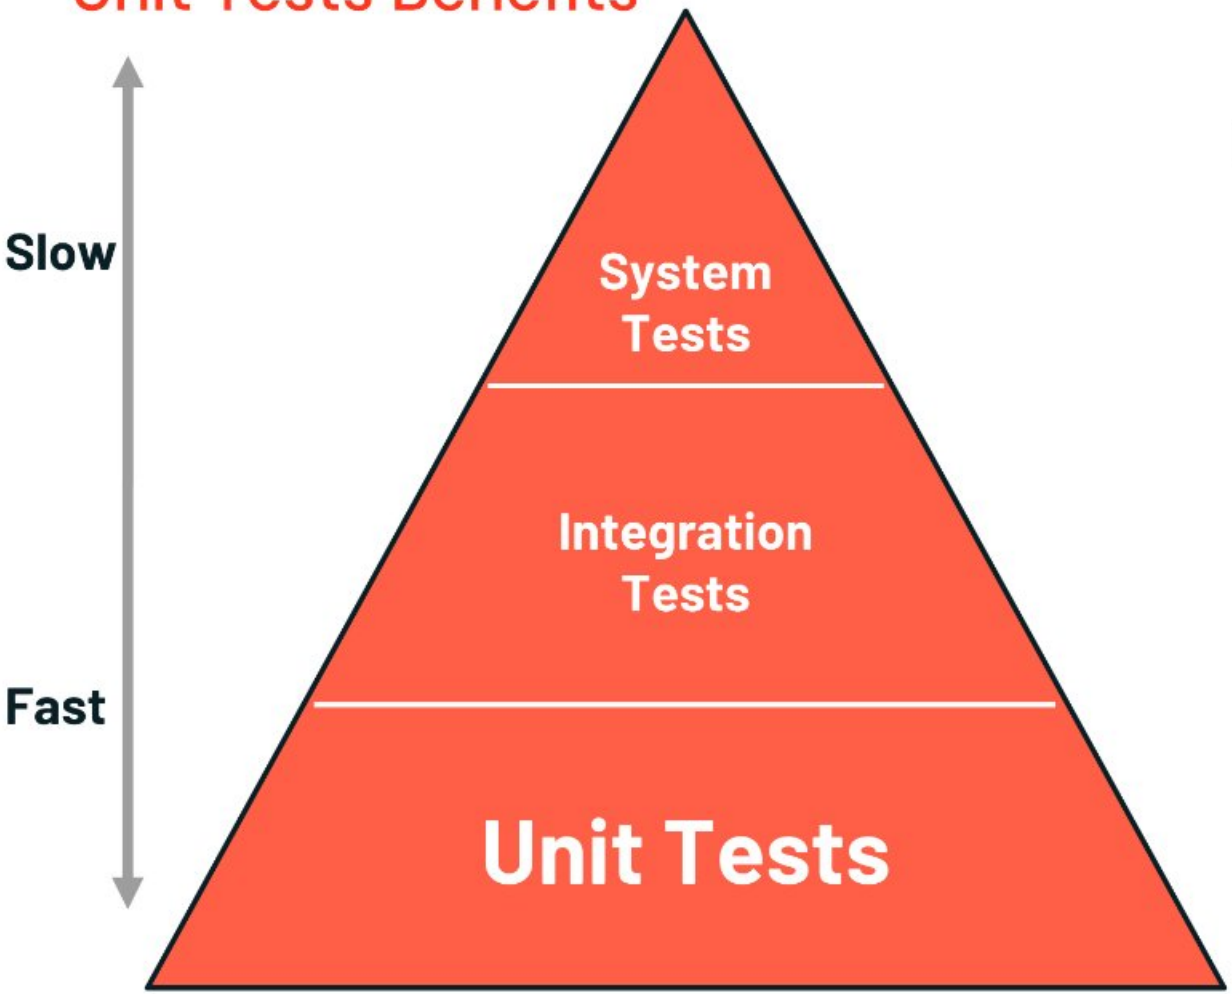

Introduction to Unit Tests for PySpark

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Introduction to Unit Tests for PySpark

Unit Tests Benefits

UNIT TESTS Benefits

- Test only **one specific** function, on small amount of data
- Catch bugs before you deploy them in your project
- Refactoring your code is easier
- Tests make your debugging easier

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Introduction to Unit Tests for PySpark

Pyspark.testing.utils Testing Functions

- **pyspark.testing.utils** provides helper functions to make unit testing in PySpark easier.
  - **assertDataFrameEqual(actual, expected[, ...])**
  - **assertSchemaEqual(actual, expected)**

There are a variety of other methods to test your unit tests, we will focus on the pyspark testing utils.

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Unit Test Example

1. You have the following function to create a column

```
from pyspark.sql.functions import col, when
def add_new_col(df, new, s_col):
 return (df
         .withColumn(new,
            when(col(s_col) == 0, 'Normal')
            .otherwise('Unknown')))
```

2. Your desired results

original	desired
0	Normal
1	Unknown
-1	Unknown
null	Unknown

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Unit Test Goal

Compare the actual result of the function with a defined expected result

3. Create the unit test

```
def test_add_new_col():
    data = [(0,), (1,), (-1,),(None,)]
    columns = ["value"]
    df = spark.createDataFrame(data, columns)

    actual_df = add_new_col(df, "new_value", "value")

    expected_data = [(0, 'Normal'), (1, 'Unknown'),
                     (-1, 'Unknown'), (None, 'Unknown')]
    expected_df = spark.createDataFrame(expected_data,
                                        ["value", "new_value"])

    assertDataFrameEqual(actual_df, expected_df)
```

Create a unit test function to test the function. Name the unit test function accordingly.

Create a sample DataFrame to test any use cases you can think of.

Execute your function on the sample data and store the result.

Create an expected result DataFrame using the sample data.

Check the two DataFrames. If they are not identical an error will be returned.

Unit Testing Framework – pytest

Pytest –is popular testing framework for Python that makes it easy to write simple and scalable test cases.

Uses Simple Syntax

Minimal syntax, just define functions starting with **test_**

Provides Assertions

Use **assert** statements to provide detailed error messages on failure

Automatic Discovery

Finds and runs all tests **automatically** with a simple configuration

Rich Ecosystem

Extend functionality with plugins for coverage, parallel tests, and more

This course provides a simple introduction to **pytest**. There are many testing frameworks available, select the one that best meets your organization's needs.

Executing Integration Tests with SDP and Jobs

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Executing Integration Tests

With Lakeflow Spark Declarative Pipelines (SDP) or Lakeflow Jobs

Spark Declarative Pipelines (SDP)

- Use **SDP expectations** to check pipeline's results (demo technique).

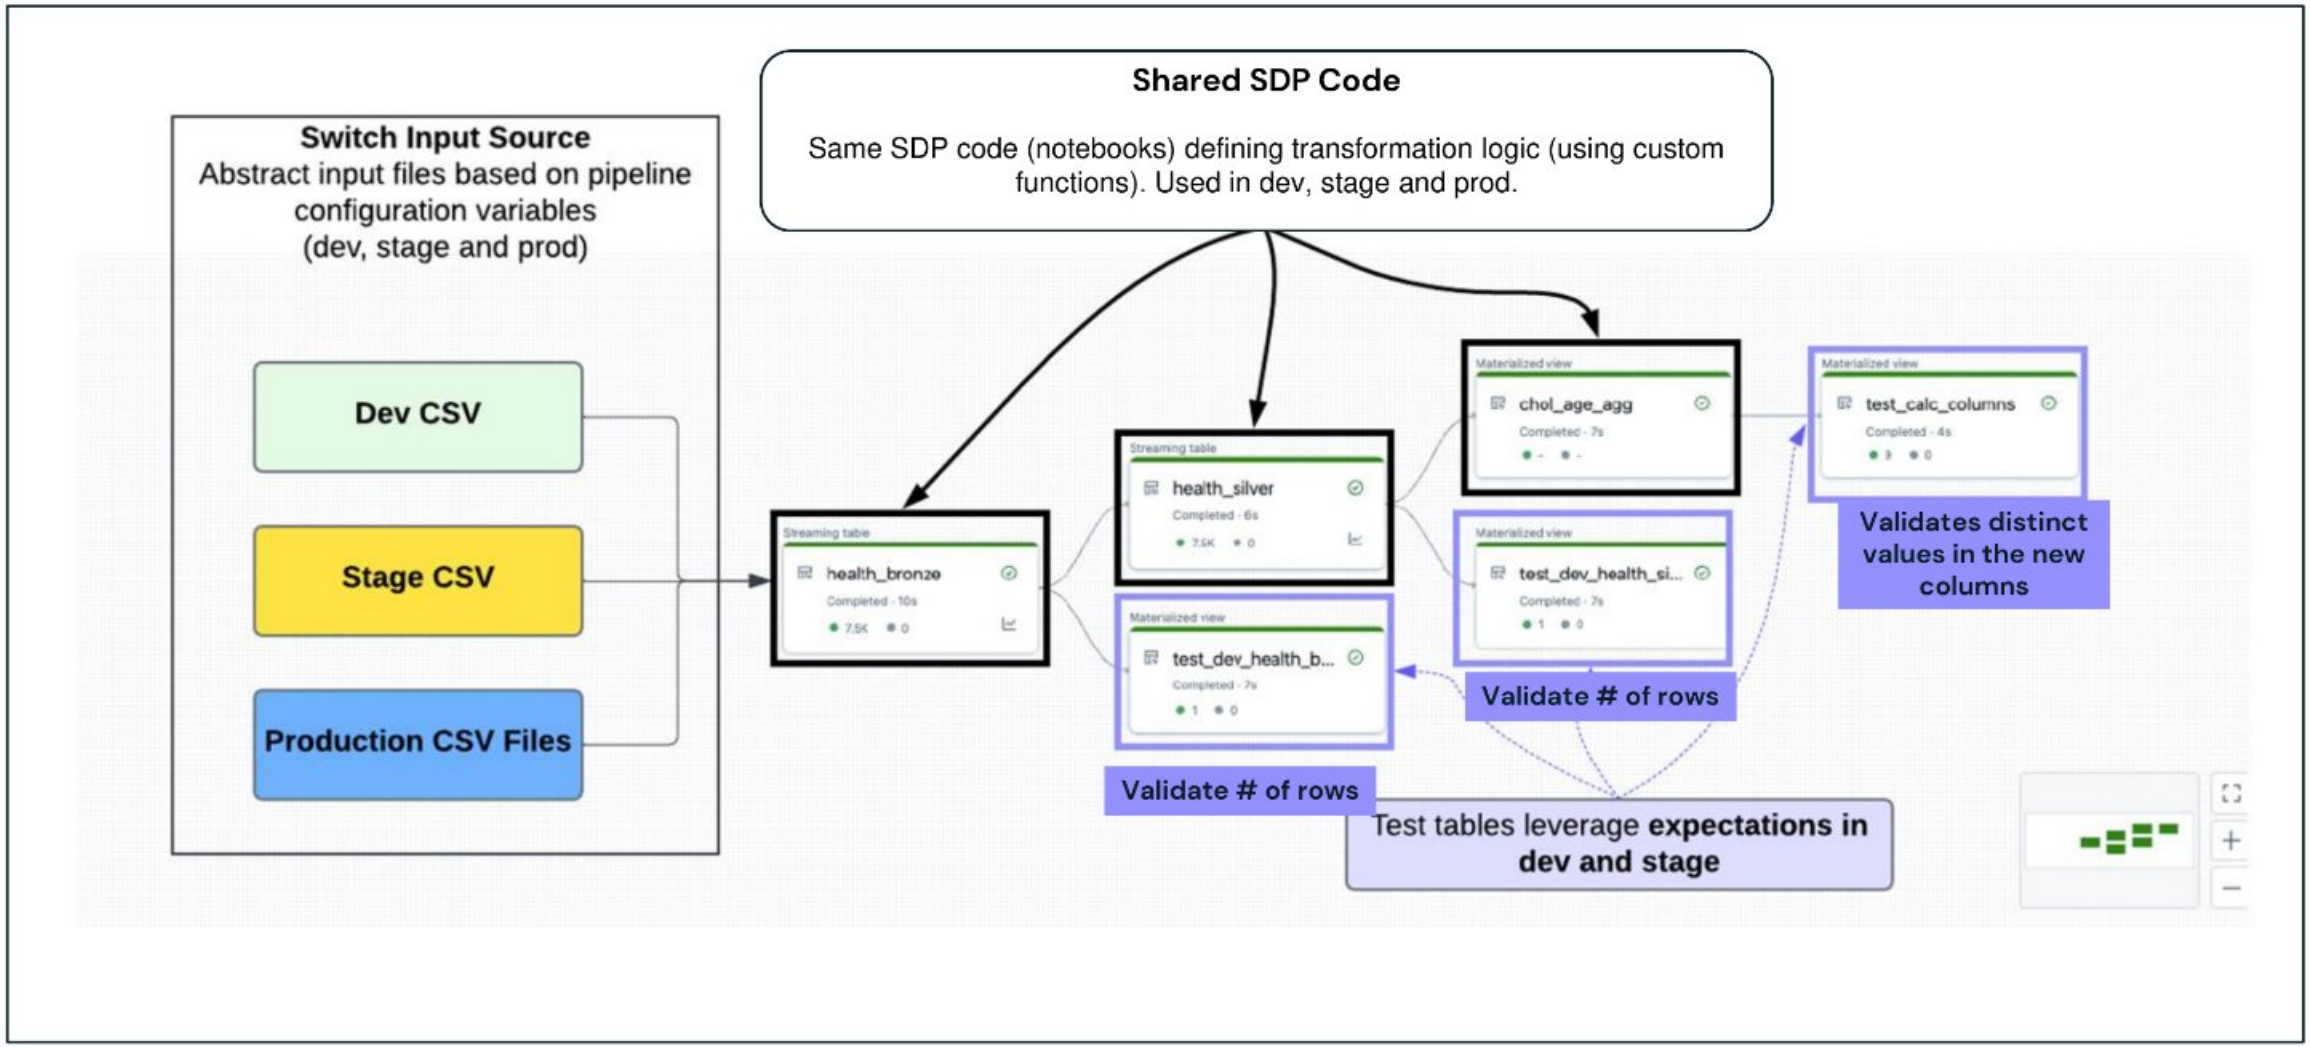

Lakeflow Jobs

- Implement it as a **Databricks Job with multiple tasks** - similarly what is typically done for non-SDP code.

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

SDP – Method 1 – Expectations

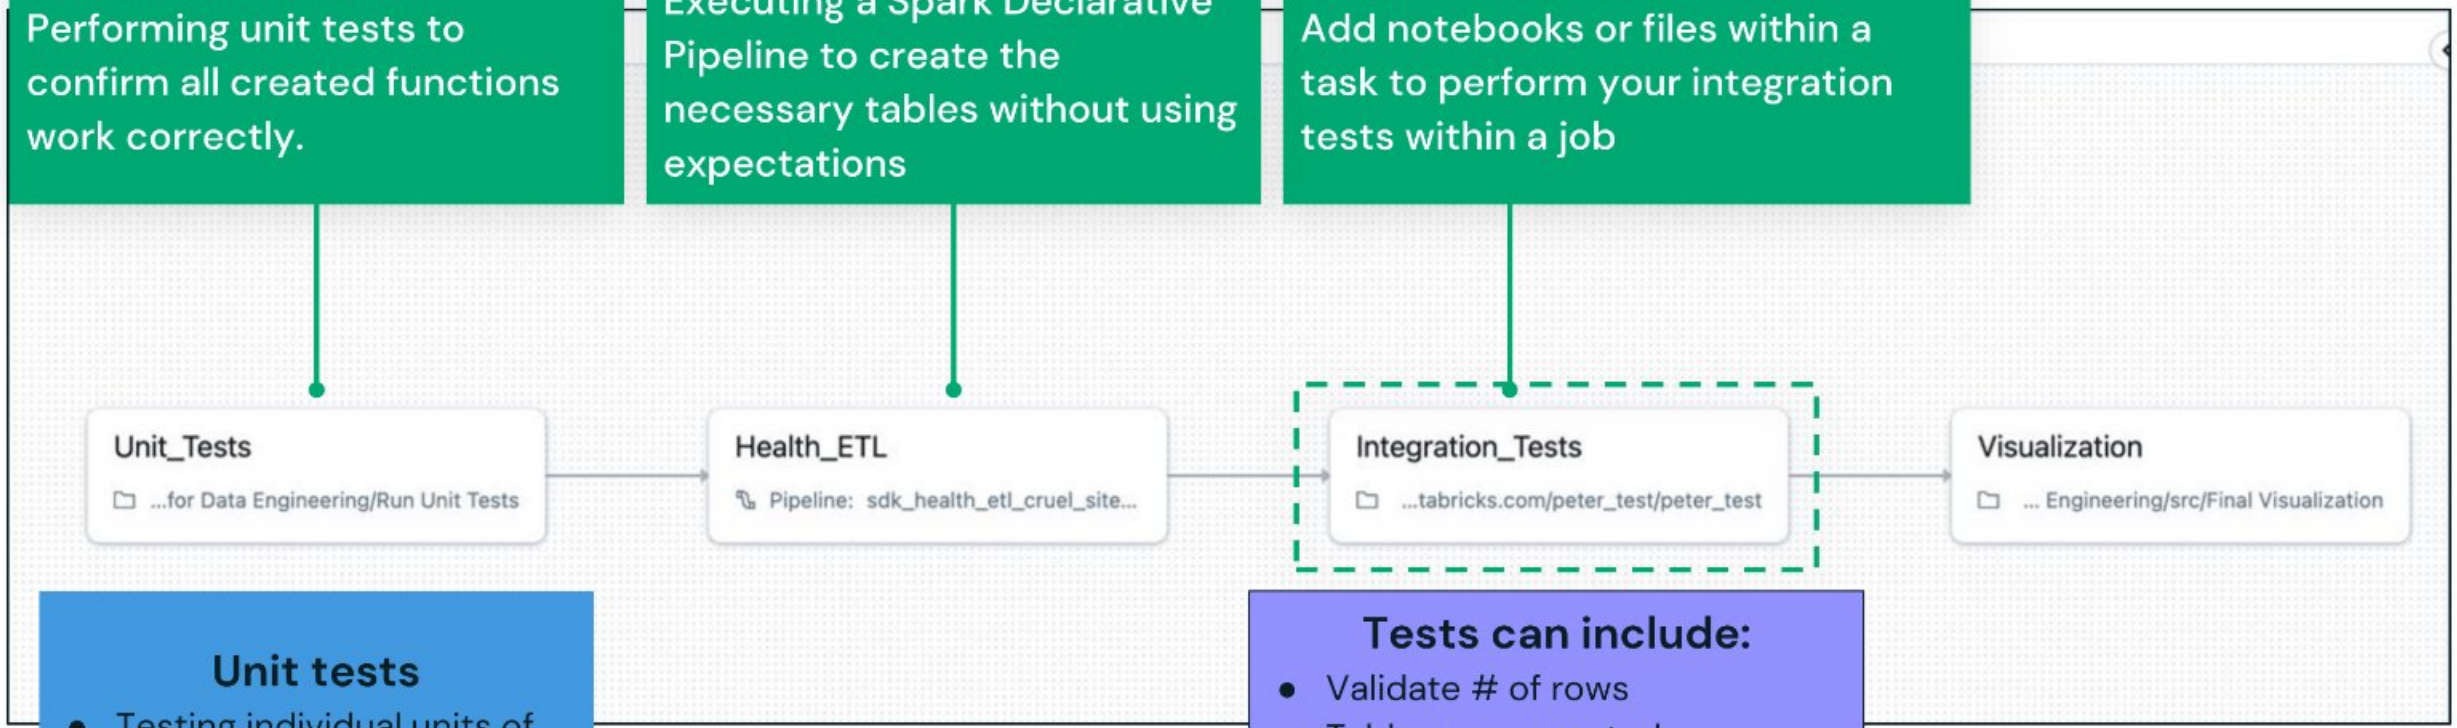

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Jobs – Method 2 – Tasks

Performing unit tests to confirm all created functions work correctly.

Executing a Spark Declarative Pipeline to create the necessary tables without using expectations

Add notebooks or files within a task to perform your integration tests within a job

Unit tests

- Testing individual units of code in isolation
- If the unit test pass continue on into the Job

Tests can include:

- Validate # of rows
- Tables were created successfully
- Columns contain correct distinct values
- Columns contain values between a specific range
- Columns contain no duplicates

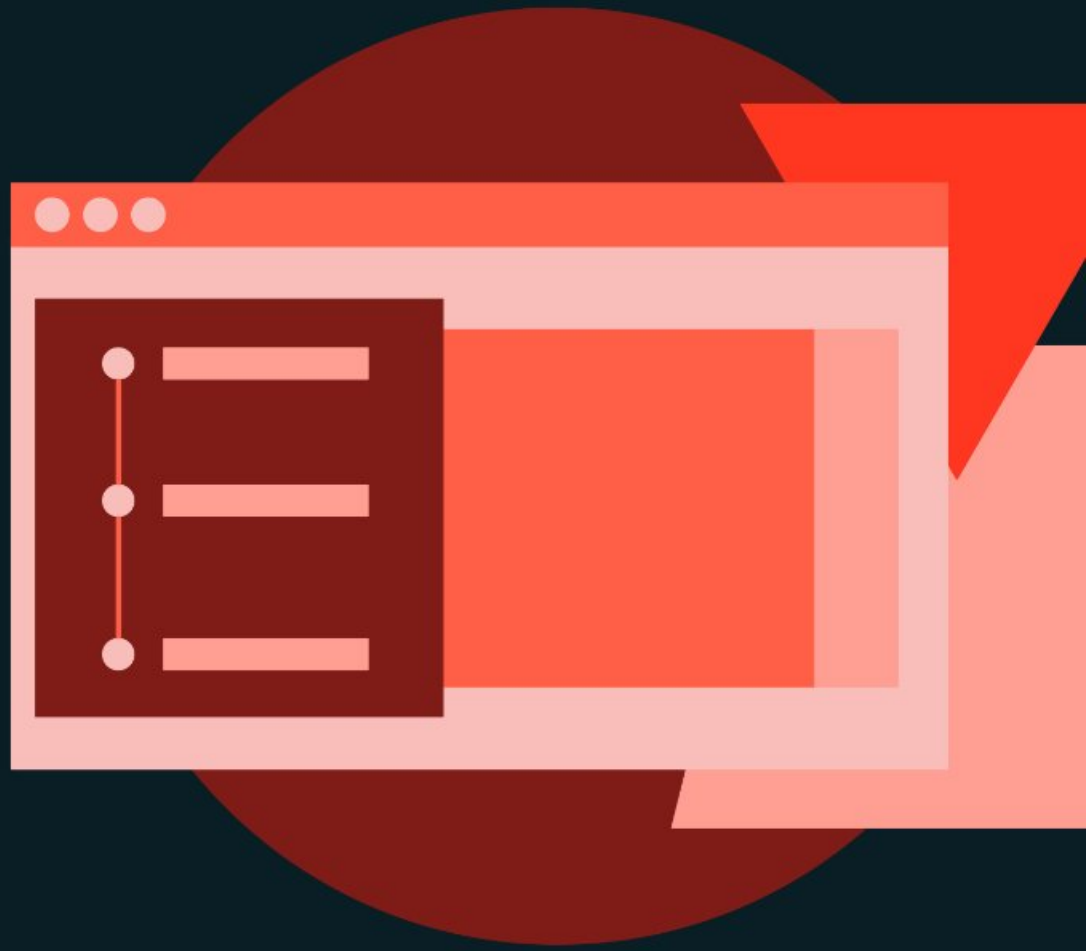

ache Spark, Spark, the Spark Lo
re Foundation.

Section Learning Objectives

- Organizational challenges with version control
- Have a high-level understanding of how Git-based repositories work on Databricks
- Explain source code challenges with Branching
- Define git Operations, common tools, and understand how Databricks supports Git providers
- Understand how to integrate GitHub repositories with Databricks
- Explain how Git Folders can be used for development
- Understand which file types are supported with repos

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

LECTURE

Version Control with Git Overview

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Complications with Version Control

Organizational Challenges

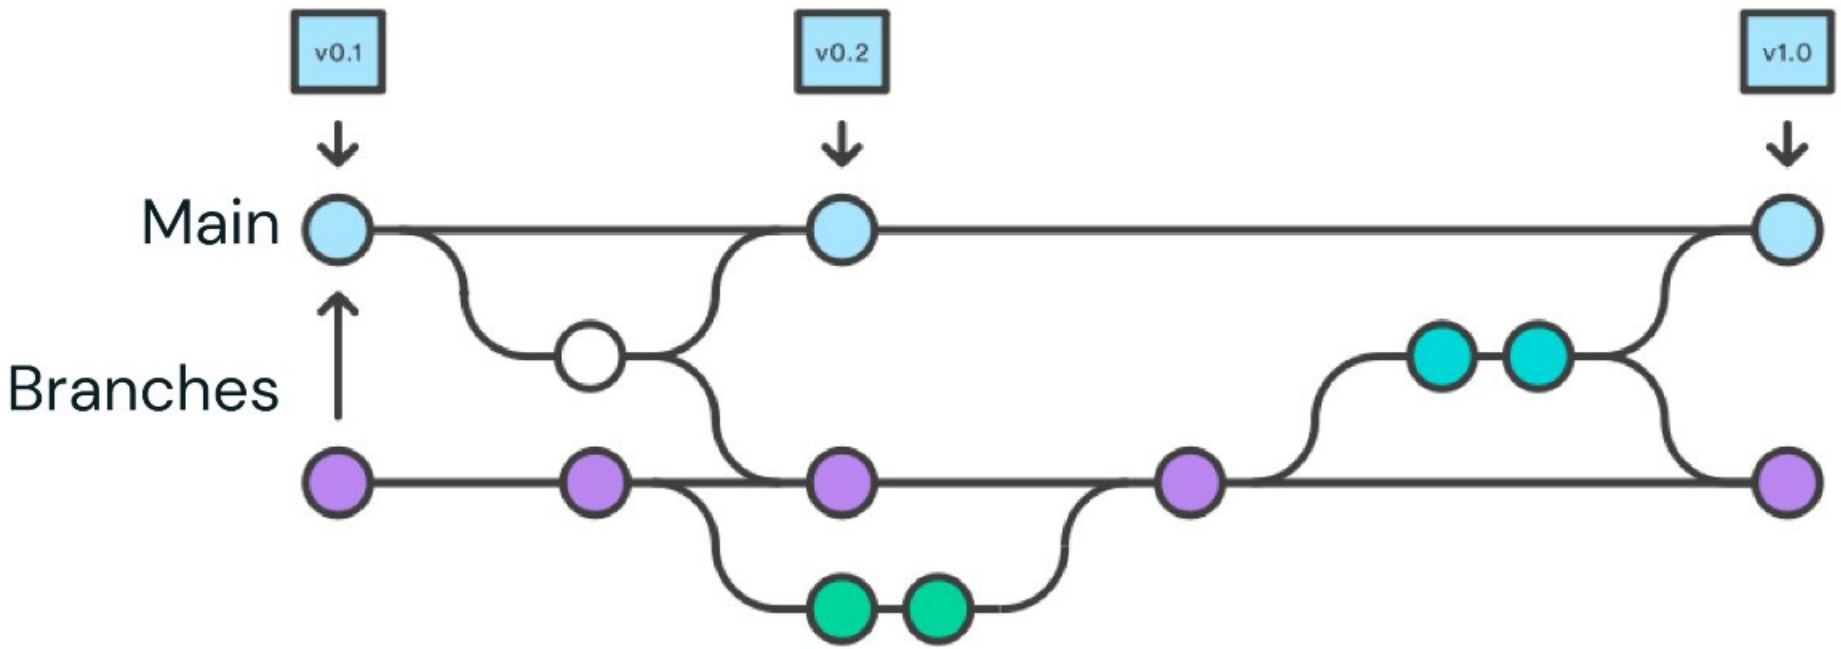

- Silos form over time that isolate development and team operations.
- Independent development leads to lower quality of software development due to lack of centralized version control (duplicate code, inconsistent standards, code reviewing, etc.)
- Unstable versioning - it can become difficult to track, revert, and audit changes .
- Without proper version control, managing frequent updates increases risk.
- Branching, merging, and CI/CD integration can become difficult, which diminishes the ability to scale development.

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Secure code changes through branching

- Complementary concept to CI/CD → Enables effective CI
- Version control changes and run through quality control before merging to main branch and deploying
- Example: Gitflow

Overview of Git with Databricks

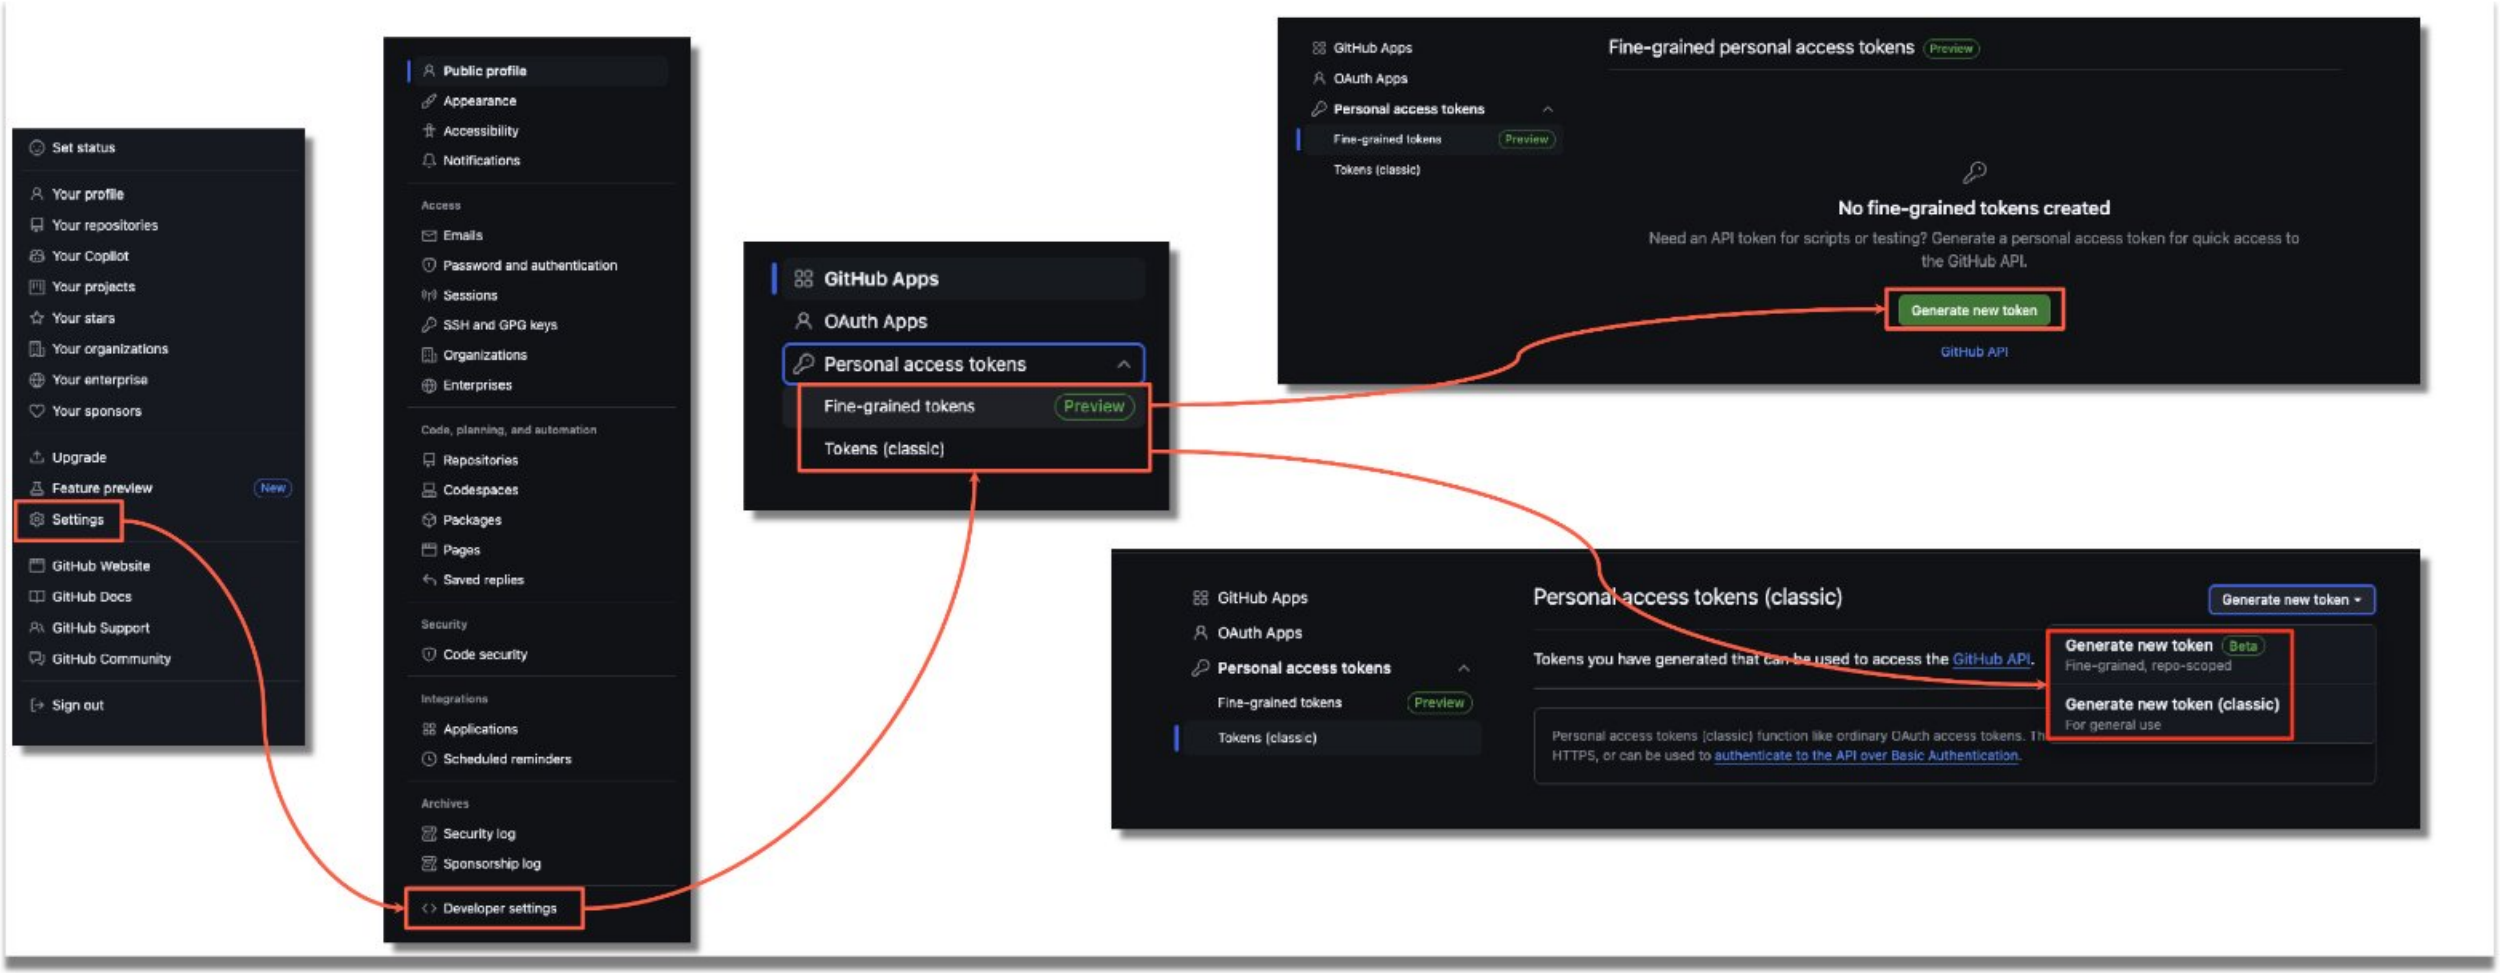

Definitions

Git is a free and open-source software framework designed to track changes in source code during software development

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Generating GitHub Personal Access Token(PAT)

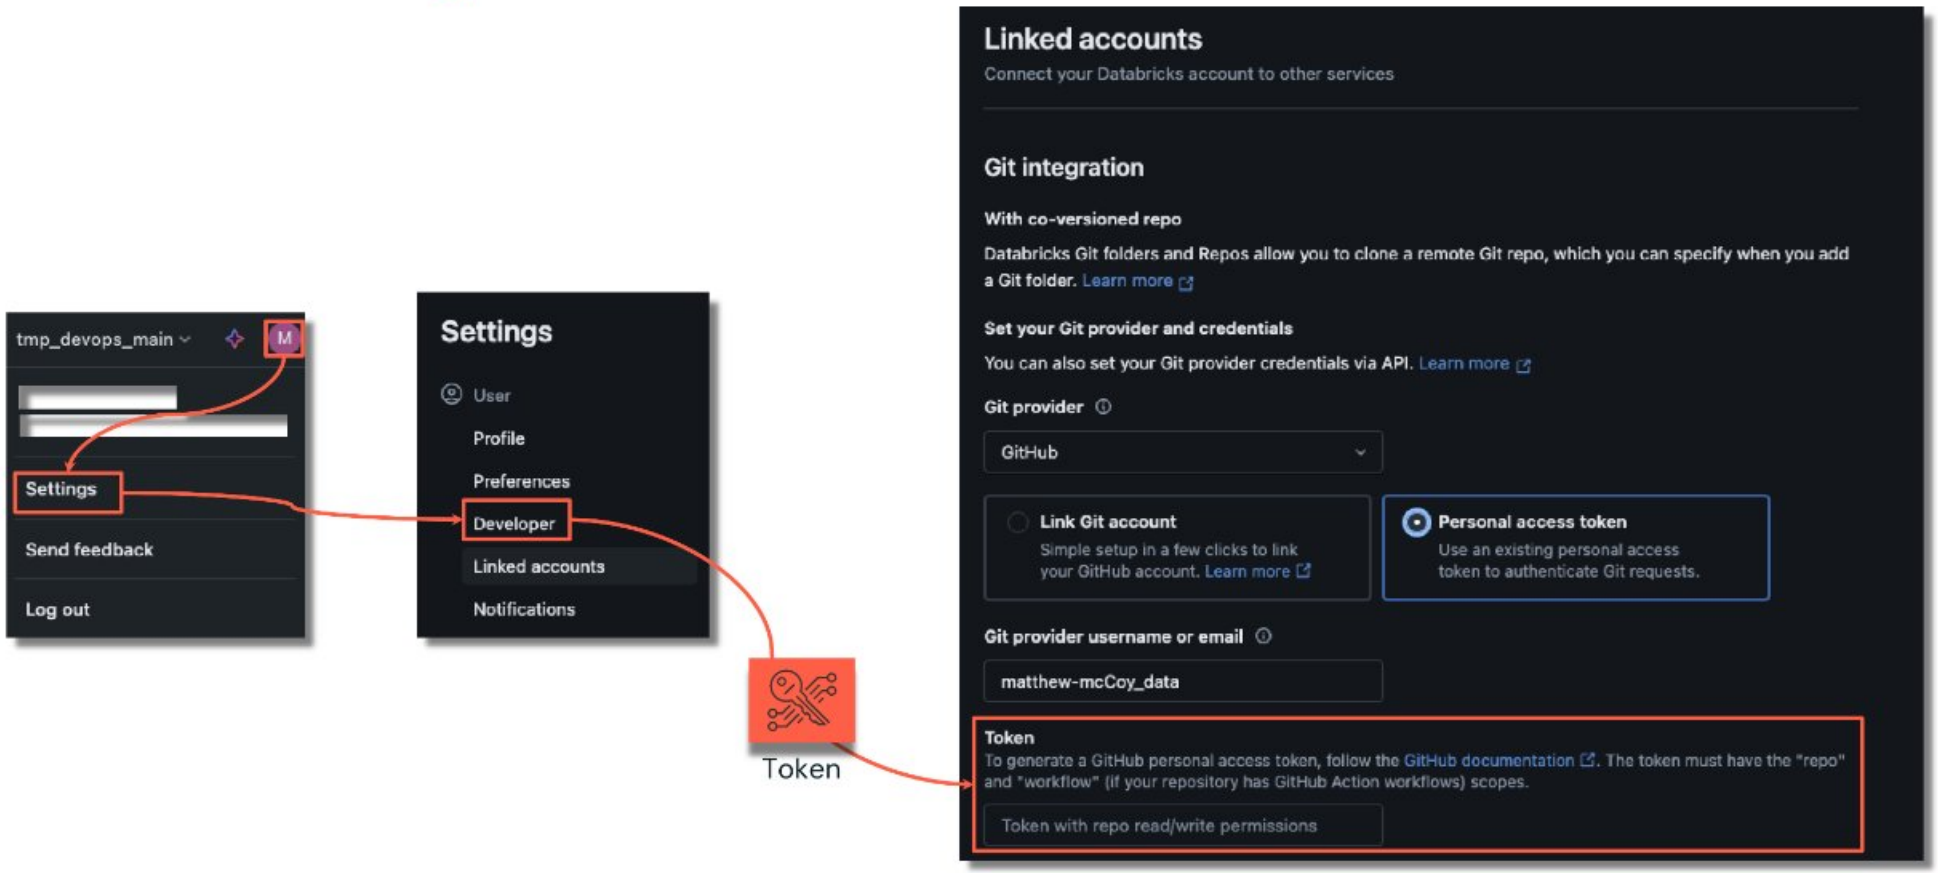

Authentication

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

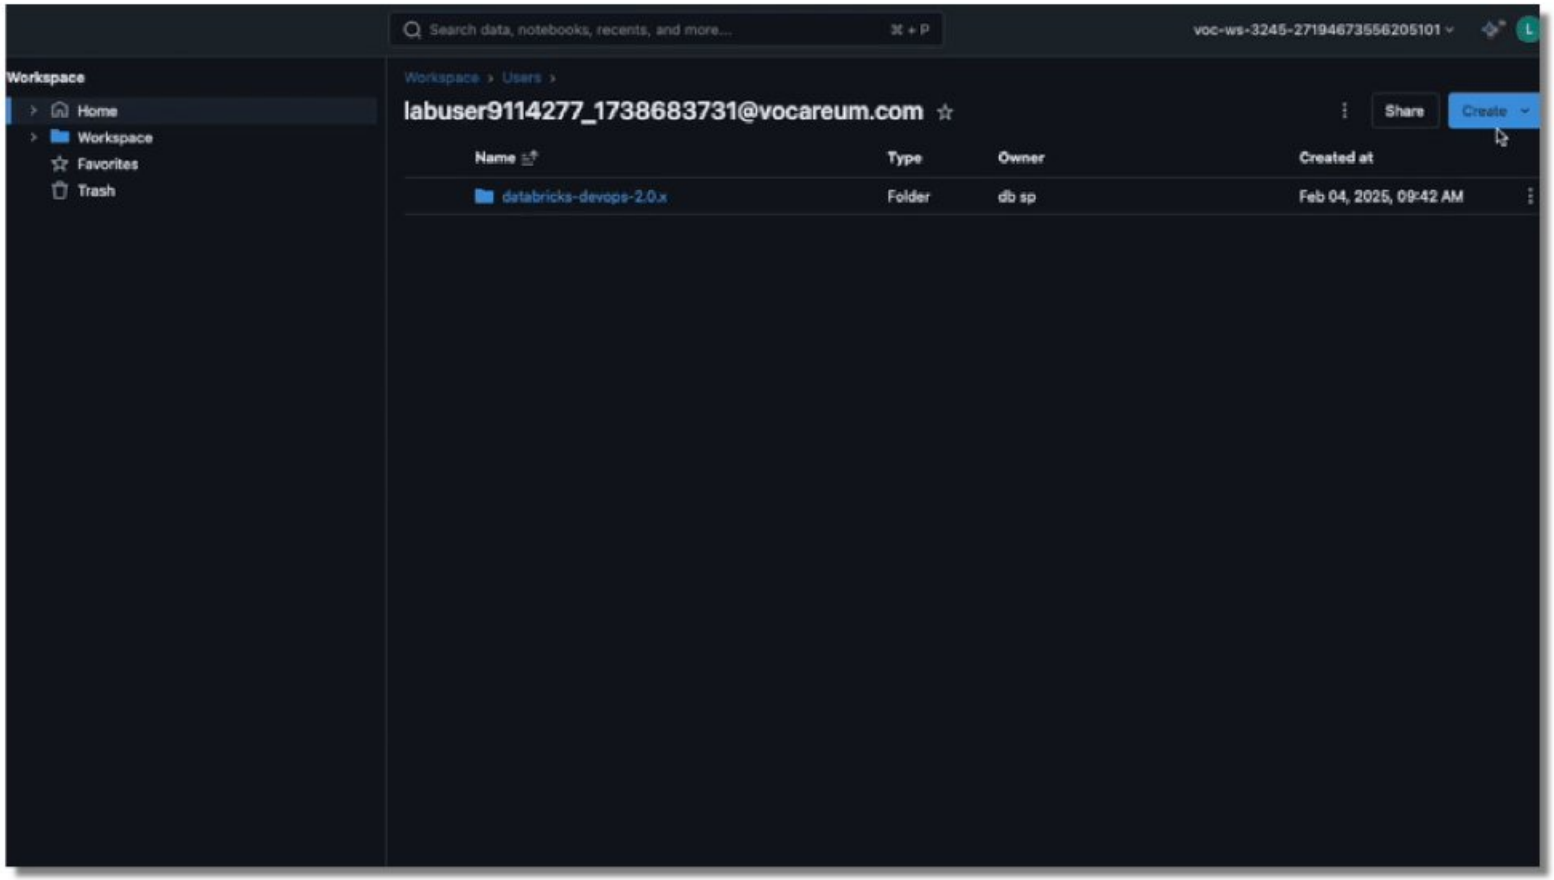

Connecting to Databricks with GitHub PAT

Seamless Integration

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Databricks Git Folders

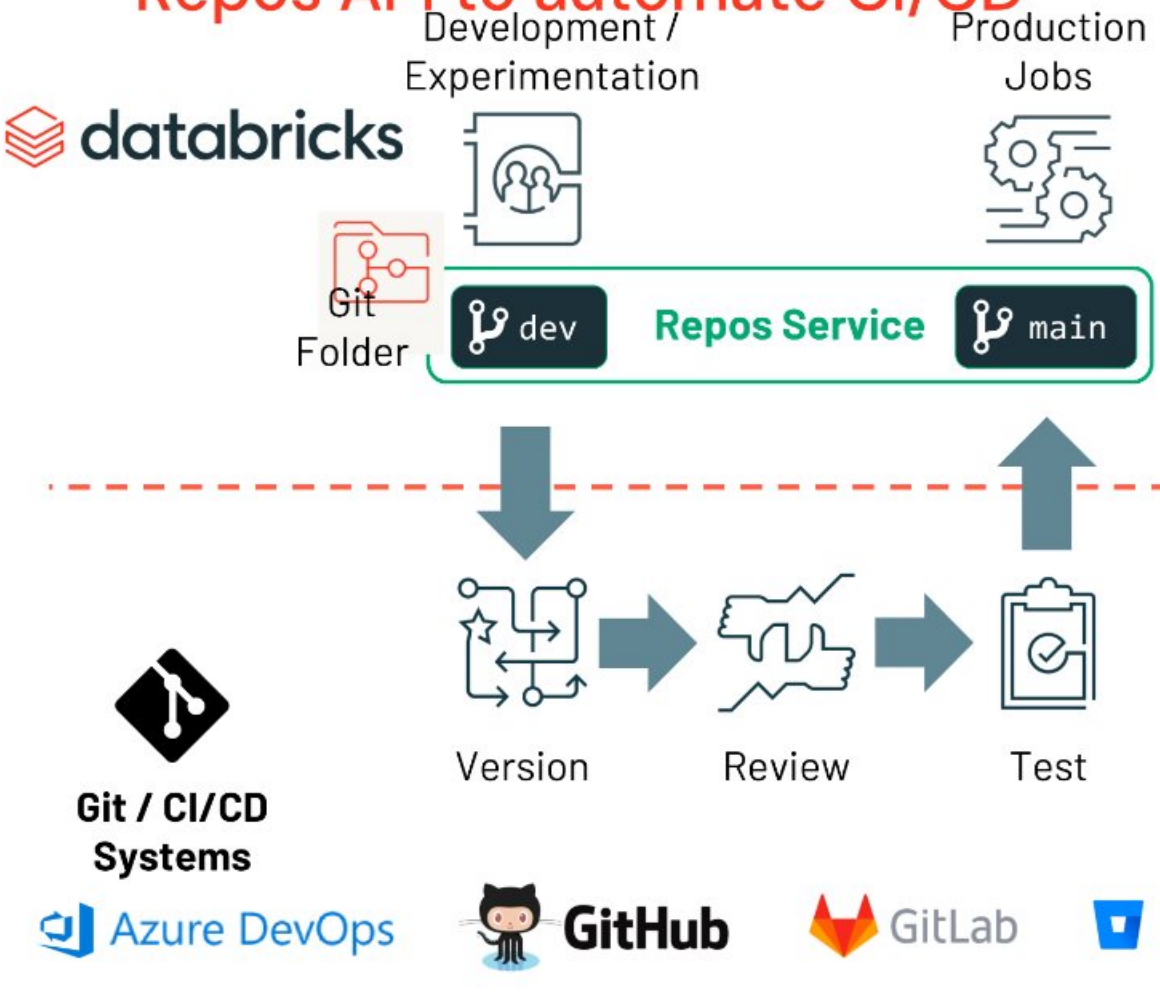

1. Clone remote repositories
2. Commit and push changes using UI
3. Pull branch updates
4. Branch Management
5. Visual validation when committing

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Git-based Repos in Databricks

Repos API to automate CI/CD

Programmatically manage Repos

E.g., set up automation to automatically create Databricks Repos for all of your repositories

Perform Git operations on Repos

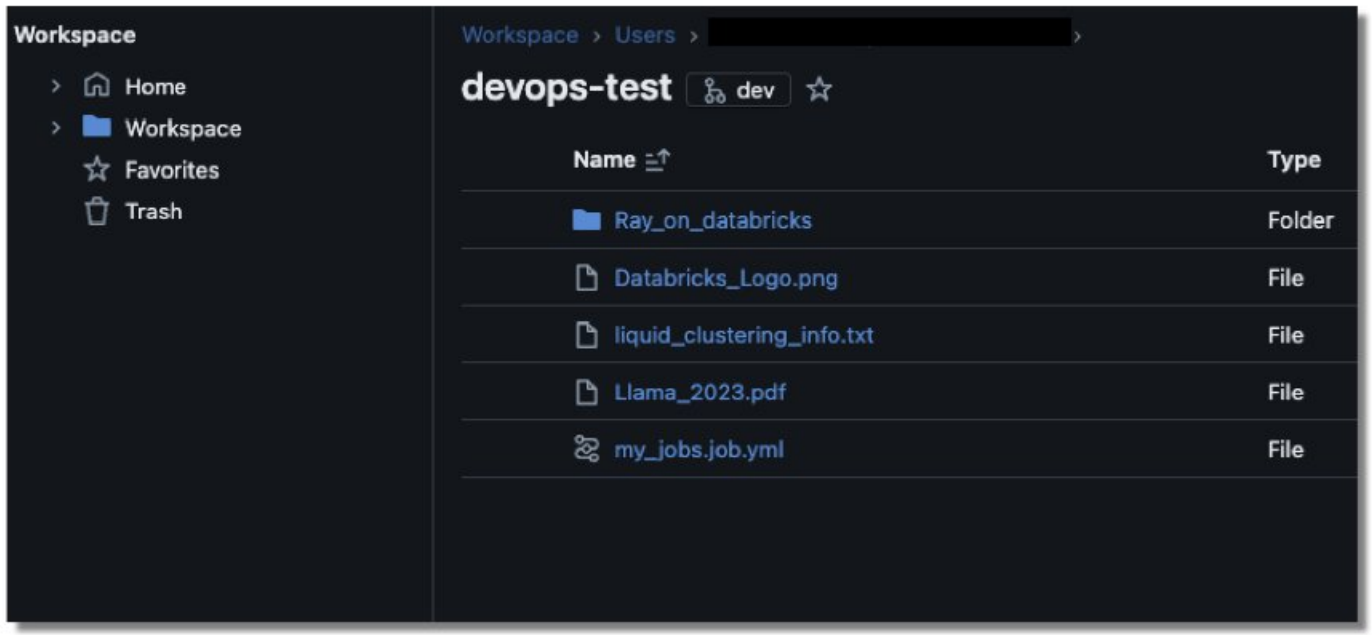

E.g., set up automation to always keep Repos in a production folder at a specified version

Specify Git branch, tag, hash for Jobs

E.g., update the Repo to a specific branch and commit and run Jobs against the notebooks in the repo

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Arbitrary files support in Repos

- Portability of code
- Library files - use Python/R files as packages

- Environment specification portability
- Build packages from the same repo

- Small data ease of use
- Relative imports

- Whatever you can do with files "just works"

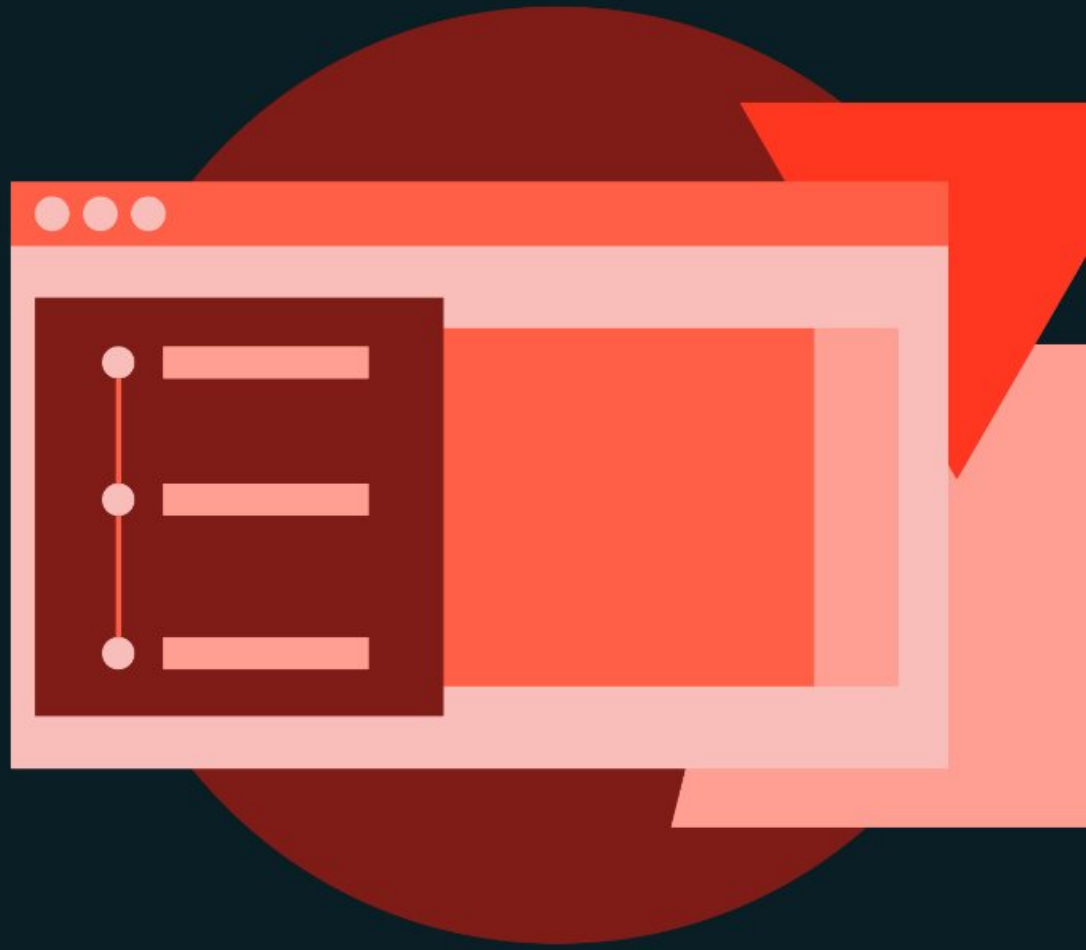

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Deploying Databricks Assets Overview

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Deploying Databricks Assets Overview

Deployment Options

REST API

Databricks CLI

Command-line interface that wraps the REST API

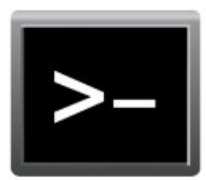

Ideal for one-off tasks, experimentation, and shell scripting

Databricks SDKs

- Available for multiple programming languages (Python, Java, Go, R)
- Allows development of applications, custom Databricks Lakeflow Jobs, and robust error-handling
- Programmatic way to interact with Databricks resources

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Declarative Automation Bundles (DABs)

Databricks recommends Declarative Automation Bundles for creating, developing, deploying, and testing jobs and other Databricks resources

Declarative Automation Bundles

Version Control

The practice of tracking and managing changes to code and other development artifacts over time.

Code Review

Systematic examination of source code with the goal of identifying and squashing bugs, improve quality, and enforce coding standards.

Testing

The process of validating expected output from relevant functions and adhering to predetermine requirements.

Continuous Integration

The process of automating development, testing, and deployment to ensure reliability.

Software Engineering Practices

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Declarative Automation Bundles (DABs)

What are DABs?

Write code once, deploy everywhere

YAML files that specify the **artifacts**, **resources**, and **configurations** of a Databricks project. This leads to easy configuration of complex notebook and pipeline interactions and **reproducibility** of your Lakeflow Jobs.

What are Declarative Automation Bundles?

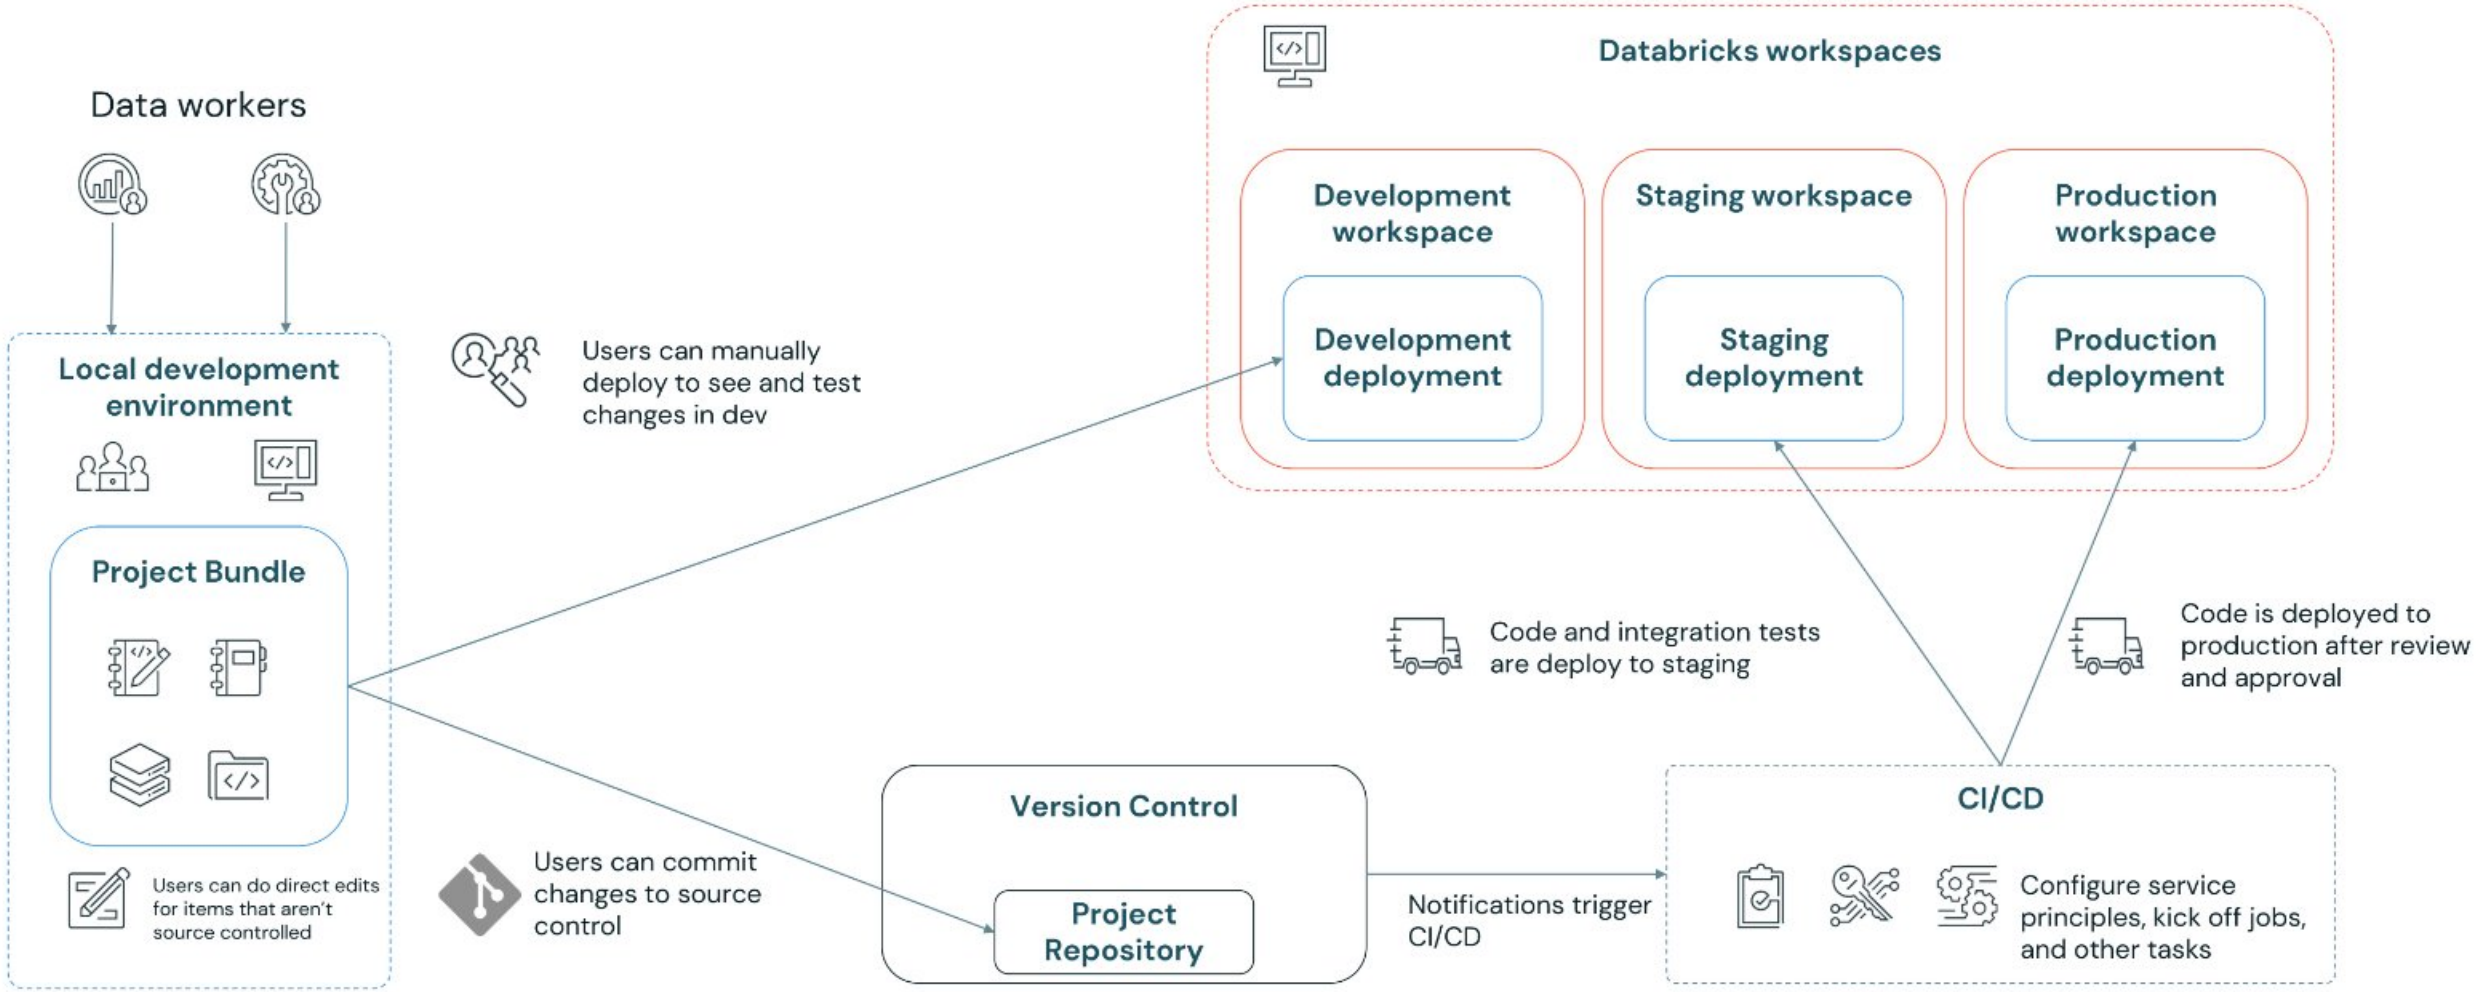

DABs are a tool designed to streamline this process for **Databricks projects**. These bundles encapsulate all necessary configurations and artifacts.

How do bundles work?

Bundles provide an exact **definition** of Databricks resources that are to be used within your project with support for **validation** and **deployment** instructions.

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.

Development and CI/CD with DABs

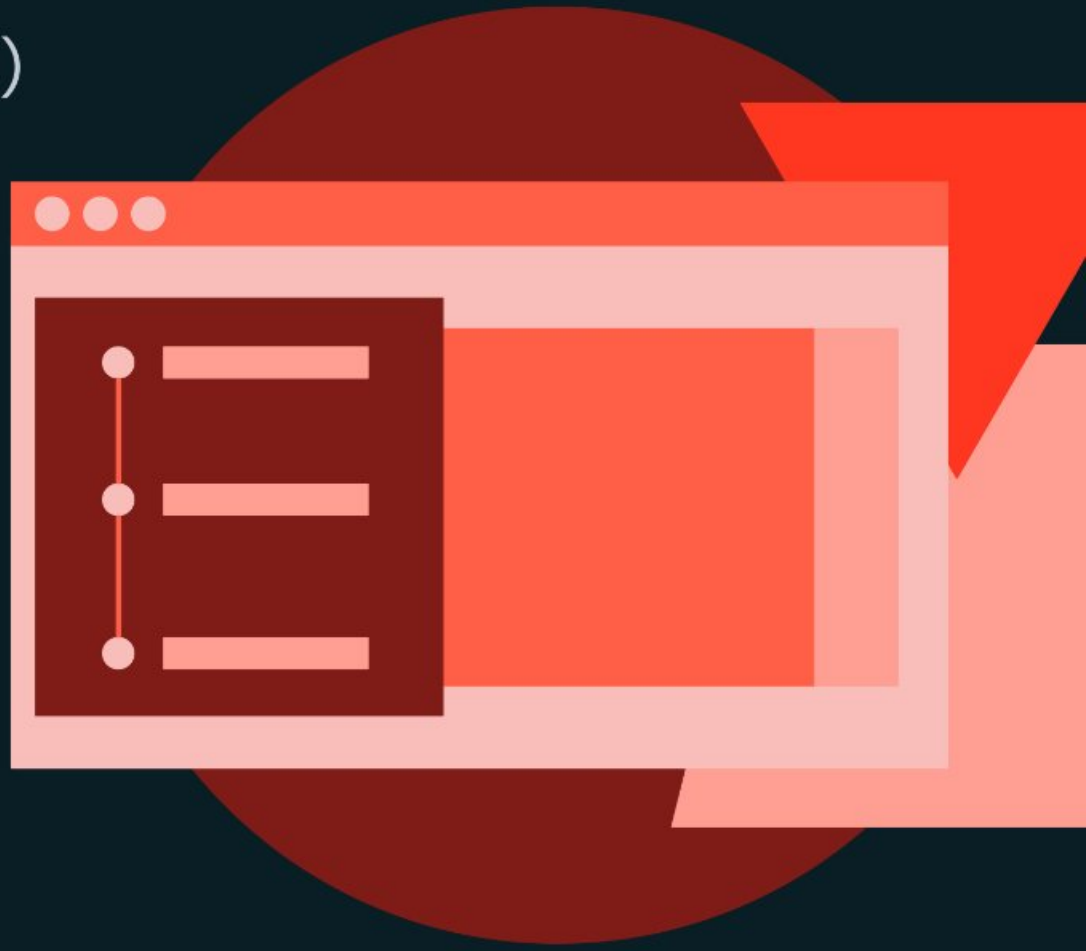

© Databricks 2026. All rights reserved. Apache, Apache Spark, Spark, the Spark Logo, Apache Iceberg, Iceberg, and the Apache Iceberg logo are trademarks of the Apache Software Foundation.
